PRIVATE: You may verbally share these rules but shall not reproduce them or place them on the internet per your acceptance of these terms by joining our class and your receiving them from The Murrey Math Learning Center.

[Table of Contents](#)

NFA Regulations require:

Disclosure of the fact that while these methods may have worked in the past, past results are not necessarily indicative of future results.

While there is a potential for profits there is also a risk of loss. A loss incurred in connection with trading futures contracts can be significant.

You should carefully consider whether such trading is suitable for you in light of your financial condition, since futures and options trading is inherently risky and should only be undertaken by individuals with adequate risk capital.

Learning by "paper-trading" is recommended for a students who switch from one trading discipline to another.

MurreyMath

TM 1998

Trading Frame Software

The Murrey Math Trading System, 1993-2000 has Trade Marked:

The Murrey Math Trading System

Murrey Math Lines

Murrey Math Trading Lines

Murrey Math Speed Lines

Murrey Math Momentum Lines

5 Circles of Conflict

Murrey Math Trading Frame Software

Trading Frame Software

The Murrey Math Trading System, copyright 1993 owns the Intellectual Rights 100%. Any "individual" may reconstruct it as they see fit.

No Software company is allowed to insert this exact Trading Frame set inside: 100, 1,000, 10,000, or 100,000 without the written consent of T. Henning Murrey or his duly assigned heirs.

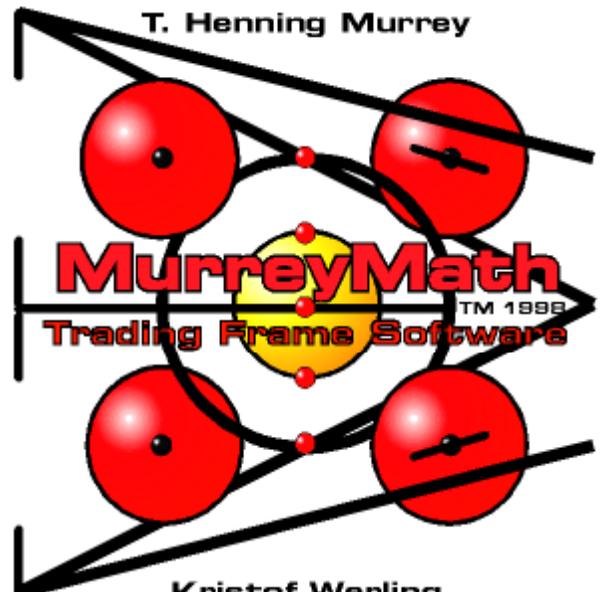

The Murrey Math Learning Academy CD may be used with any group as long as it is not altered from its latest approved version.

The Murrey Math Learning Academy welcomes the opportunity to assist any individual who wants to help others learn to trade more successfully by pointing out the advantages and simplicity of trading using **The Murrey Math Trading System**, 1993, T. Henning Murrey Henning, Tennessee

[Table of Contents](#)

T. Henning Murrey

The logo features a central yellow circle with a black dot and a horizontal line through it. This central circle is surrounded by four red circles, each with a black dot and a horizontal line through it. The circles are arranged in a diamond pattern. The entire arrangement is enclosed within a black frame that consists of two parallel diagonal lines and a horizontal line. The text "MurreyMath" is written in a bold, red, sans-serif font across the center, with "TM 1998" in a smaller font to its right. Below "MurreyMath" is the text "Trading Frame Software" in a smaller, red, sans-serif font.

The Murrey Math Trading System invites you to convert your trading habit to a simpler way to trade

Our intent, Goal, Objective and mission is to offer you a concise, exact constant set of rules that may be transferred to any market with the assistance of our Murrey Math Trading Software.

There are only ten simple rules that assist us and support what we see unfolding in front of us.

The Murrey Math Trading Frame Software automatically pre-sets Seven Rules for us as we pull up our chart.

We are left with three simple rules that control our Entry Price, Protective Stop and 50% Exit Price with a profit.

The Murrey Math Way is to trade off simple rules.

Table of Contents

**There are no “Natural Golfers” and there are no
“Natural Traders” but there are “Natural
Gamblers” and “Quitters” and
“Procrastinators” and “Buy and Holders” and
“I’ll wait one more day for a turn around”
traders who change their trading strategy every
time their trade goes against them.**

**87.5% of all golfers never take lessons and
every golfer ends up shooting worse scores.**

87.5% of all Day Traders lose short-term and they will change strategies on a whim.

**No extra amount of Education, Power, Money, experience in “watching” can
replace 8th grade math set to logic and common sense.**

Our goal is to enable you to see the obvious.

Table of Contents

Every great golfer started off hitting their shots too hard and they had to be taught to swing smoothly and accurately. The human brain may discharge almost 175 different thoughts every 60 seconds. Great golfers think about the results just before it happens, not what happens just before the results.

No commercial airline pilot in the air looks at more than 3 rules after the plane is up to cruising speed.

Most traders love indicators that will add to their confusion. Behind every lagging indicator is a trader with a built in excuse for losing.

The Murrey Math Trading System is simple, but it is not simplistic.

No human ever asks to see the physics drawings to prove that the Golden Gate Bridge won't collapse while you're stuck in traffic on the middle of it.

Traders think added information equates to more knowledge about trading. I am living proof you don't have to read more than one book to see how to trade all markets using logic and common sense price formation recognition.

Table of Contents

Buy low - Sell High

I'm a long term investor. I wait for major pull-backs and load up.

My friends provide hot tips, 'take over' rumors are great plays.

I hate paying taxes and brokers. The markets always go opposite to my positions. The market goes up 70% of the time so I let it.

My broker handles all my finances. I'm too old to worry about it anymore.

I just buy it and stick it in the lock box. Insiders already have the news. I'm too busy to follow all those indicators. I'm too old to learn another software program.

Gurus always have one more excuse why their system failed.

Trading is a conditioned response to already seen price formations.

How fast you learn to trade more successfully is in direct proportion to how simple you want your rules to trigger a response.

[Table of Contents](#)

Trading Frame Software

Americans are in two schools of Trading Strategy:

- 1) If it isn't expensive it isn't worth learning.
- 2) There is one "secret formula" yet discovered.

Rookie Traders always want to learn too much too soon, then forget too much too fast! Adult men always have one more "excuse: for every reason they should change their old trading habits.

Trading is learned fastest when one accepts the simple fact that one must learn to trade off price formation recognition of no more than sixty four different "wave" patterns.

87.5% of all traders in the world think all markets are random.. Too many traders say, "I don't want to learn another trading system, and I'm no good at computers, nor do I like math.

Most traders hate slow markets and quit trading volatile markets.

People want to make too much Profit per trade.

People think sitting in front of the screen all day will change the outcome of the current position.

Every serious student of trading will already have their chart and their trading strategy ready before the bell.

The Murrey Math Trading System trades off only Ten Rules:

**Seven of these rules are set automatically by
The Murrey Math Trading Frame Software.**

Trading Frame Software

Eight Revelations revealed by T. Henning Murrey seen back in 1992 and shared since then with every student who is willing to change their mental habit from random trading to “Pure Math” percentages off exact internal Trading Octaves established simply off the current 16 trading days price action.

1) Every Trading Octave 8/8 presents 5 different trading strategies:

- 1) Normal Trading Range
- 2) Consolidation Trading Range
- 3) Premium Trading Range
- 4) Over Bought Trading Range
- 5) Over Sold Trading Range

2) No past history needed to trade any market inside our current Murrey Math Trading Frame: 16, 32, 64 days

Table of Contents

3) Don't need to know any more fundamentals than where the market enters the Murrey Math Trading Frame.

4) All markets trade inside a Square:

100, 1,000, 10,000, or 100,000

And so every market shifts momentum price 1/8ths after the daily price action closes above 25%.

5) Predict market "breakouts" to higher highs or lower lows off the MMRPM's 1.125% off Binary Math.

6) Trading Frame is automatically set off us each year off the 1st Frost each month.

7) Automatically predicts 50% profit sale price points as soon as any market reverses (up or down).

8) Never consider “exact” highs or lows to set 8/8th

No amount of schooling or on-the-job experience trading can wipe out the psychological personality to bring to the trading arena.

Four Personality types:

- 1) Type “A” : Aggressive enter with no strategy.
- 2) Passive procrastinators wait too late.
- 3) How much do I Make? How expensive is it?
- 4) Study everything to the point of never committing.

The 5 Areas of Conflict to “Change”

Is your current trading habit or method...

T.V.:
News,
“Insider
information”

Risk Avoidance:
Afraid to take a chance

Habit:
Trading the same
way off emotion
not Pure Math

Knowledge:
Trusting a “guru”.

Desire for a
good life
“**greed**”

87.5% of all Adult men want one answer to solve all trading strategies and if they have to study they go to the next guru and say he couldn't teach them in one sentence.

[Table of Contents](#)

MurreyMath

TM 1998

Trading Frame Software

The Murrey Math Trading System, copyright 1993

eliminates your habit strategies from your position decisions

**You can never
change your
trading "Habit"
until you change
the four ways you
form your "habits".**

**No "guru" or software
program or book can
change your trading habits
until you convert to trading
off Pure Math.**

[Table of Contents](#)

MurreyMath

TM 1998

Trading Frame Software

Trading is simple! Every market has its own Trading Frame "Rookies" want to make things complicated!

Seasoned Traders always add to their trading strategy! Trading every market requires knowing only three (3) factors:

- 1) **How far has this market presently run up or down from its last reversal?**
 - A) Short-term
 - B) Intermediate-term
 - C) Long-term
- 2) **What angle of "speed" is it moving?**
- 3) **What is this market trading off yesterday's close? Above or below?**

Anything else you want to attribute to your Trading Strategy is more confirmation of these three rules.

The **Murrey Math Trading Frame Software, tm 1998**

Sets the better Trading Frame in Price and Time and will automatically set 100 markets in 15 seconds with only one "Click" on your Directory's name.

Table of Contents

MurreyMath

TM 1998

Trading Frame Software

Trading is simple! Every market has its own Trading Frame "Rookies" want to make things complicated!

Seasoned Traders always add to their trading strategy! Trading every market requires knowing only three (3) factors:

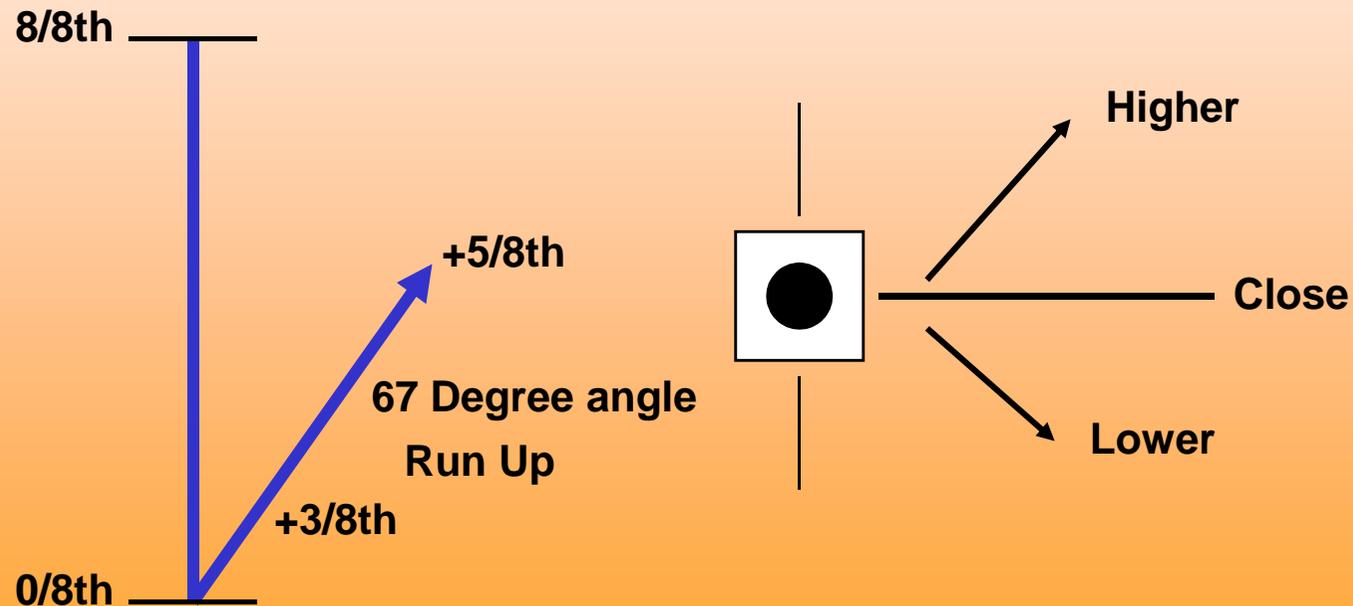

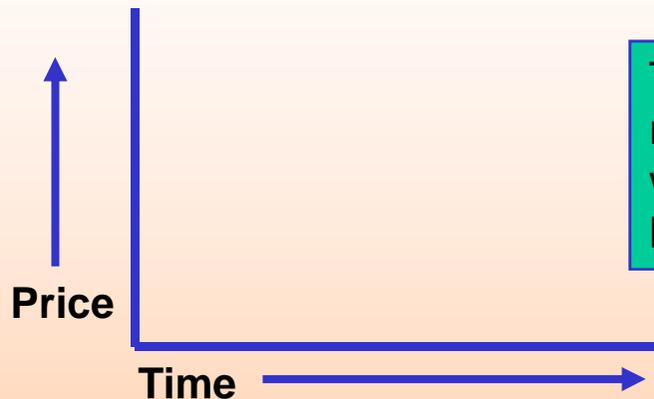

Table of Contents

Too many "Rookies" never consider Time, and too many Serious Traders keep waiting for some "future" market move to develop but both are always "busy" or "distracted" when it develops!

The ***Square in Time*** is actually a rectangle since each quarter has 13 weeks so we set each quarter to Binary Math: 64 Trading Days

Binary Murrey Math: 64 Trading Days:

1: 2: 4: 8: 16: 32 Binary Math "produces" the **Harmonic Trading Octave**

8 x 32

8 x 64

8 x 16

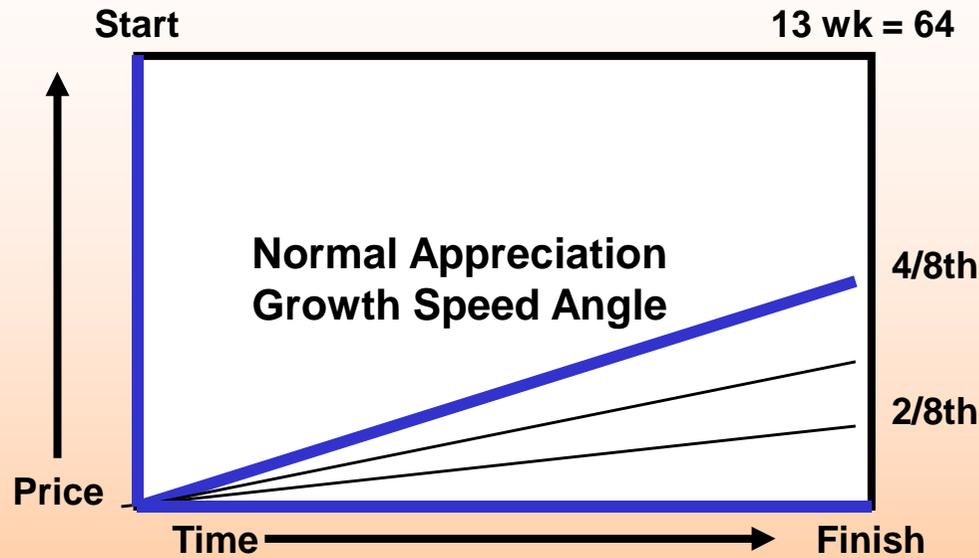

We default all markets to 16 days. We don't "predict" the future past 16 trading days since W.D. Gann "hit" the low and high of the Depression in 1932 and 1929 but no one listened or "believed" him!

July 9, 1998, I warned of a market fall this market went up +7/8th in Price in 5/8th in Time.

Table of Contents

Table of Contents

The Dow 30 Stocks are up on an all-time high and this stock is trading - 33.% lower.

Boeing Aircraft

Why?

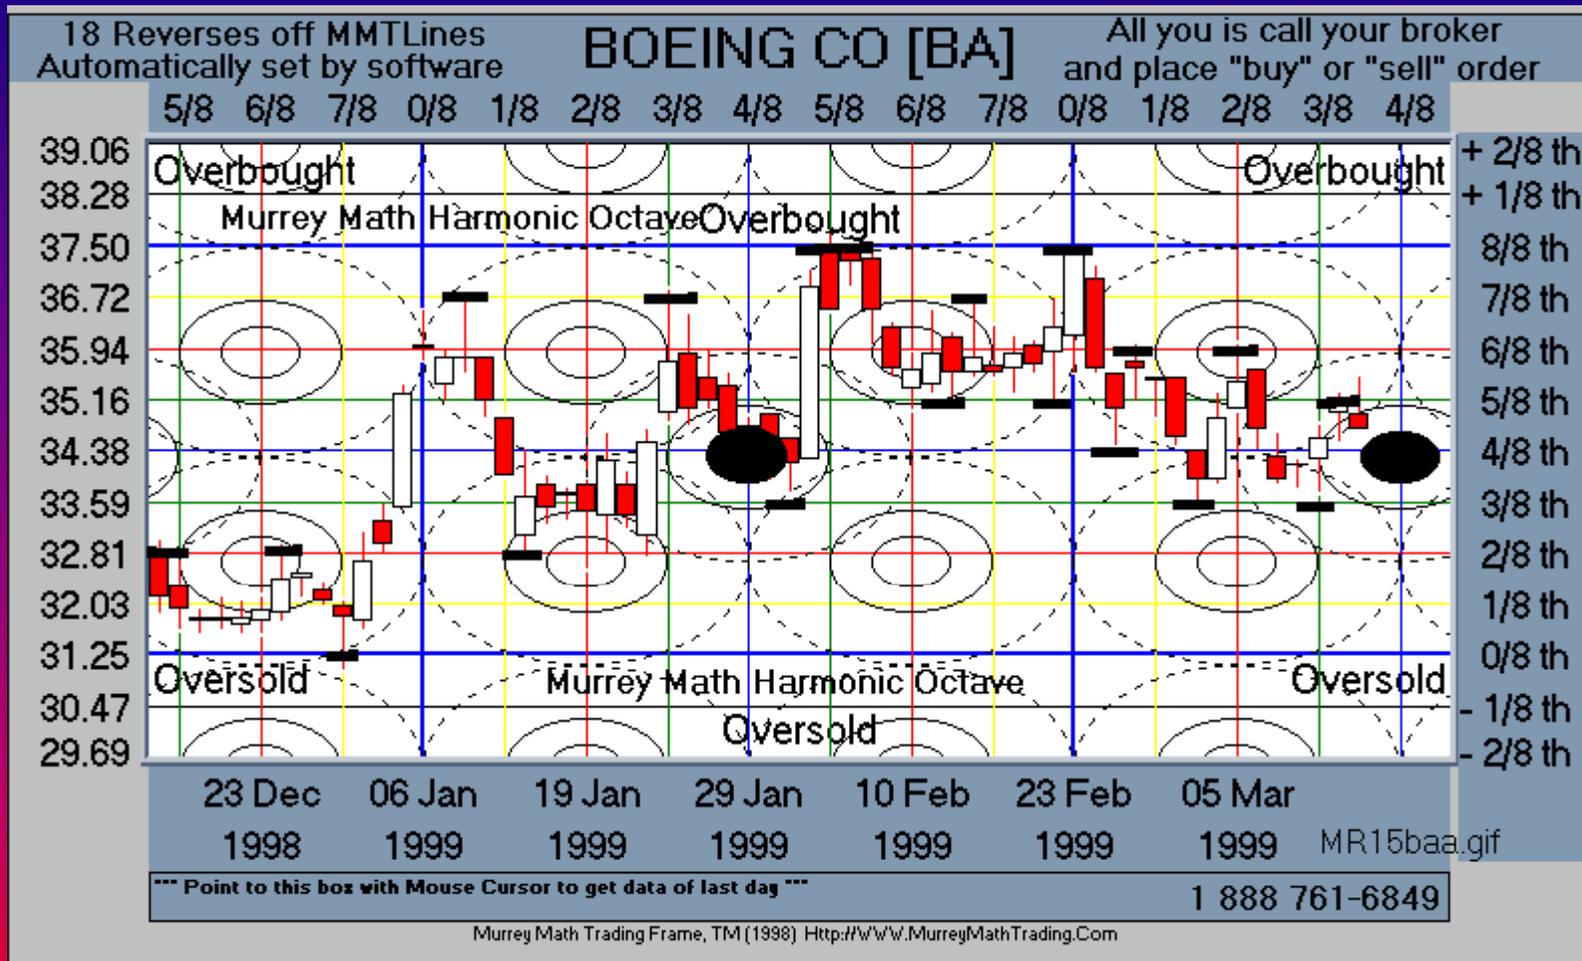

Sample market trading inside its 0,1,2,3,4,5,6,7,8/8th MMTLines

This market reversed 18 times off pre-set MMTrading Lines that never consider any specific high/low price reversals but man simply “eye-balls’ the “Entry” of any market into its current MM Trading frame set to The Harmonic Rhythm: Music:Pure Math.

Table of Contents

Please count the 18 reverses this market's daily price action reacted and reversed off our MM pre-set internal Octave Trading Lines. We don't set our lines to price, we let price come to our MMTLines.

This is the only trading system in the world that presets where markets are to go (up & down) inside and we sit back and wait to trade!

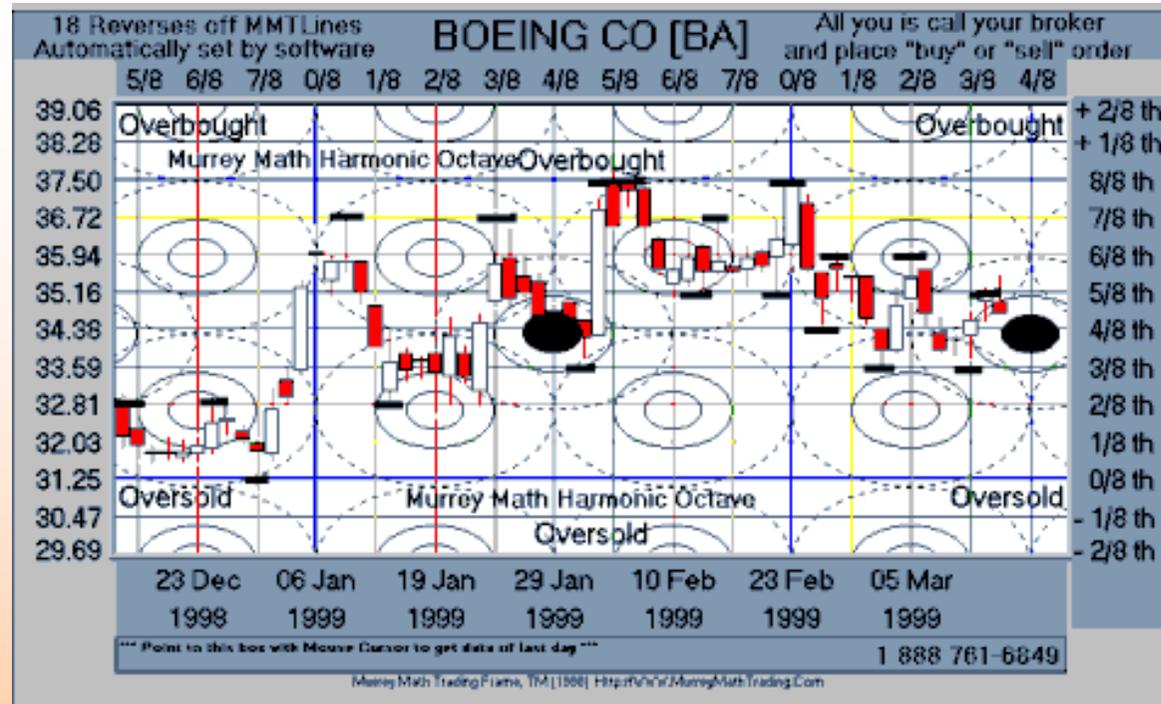

Table of Contents

Example:

Boeing Aircraft

Please notice how many times the daily trading action of this stock "Knew" where our pre-set **Murrey Math Trading Lines** were...

(and reacted by reversing off them)?!

There are (18) reverses off our Internal Harmonic Octave 1/8ths set to Music!

Trading Strategy: Have your entry and exit prices already called in before the prices get to our MMTLine.

This kind of octave is referred to in the future as the

Murrey Math Harmonic Octave.

Table of Contents

Now, what exactly does the software automatically know to do when the price closes any where above +2/8th or anywhere below -2/8?

It simply doubles the size of each 1/8th.

Has it ever been wrong? Not yet!

No guru ever figured this one out!

When will high markets get higher highs?

When does low fall to lower lows?

All markets must close 4 cents below -2/8ths for the software or our trading strategy to move lower into the next Octave.

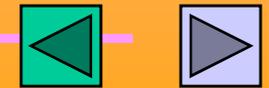

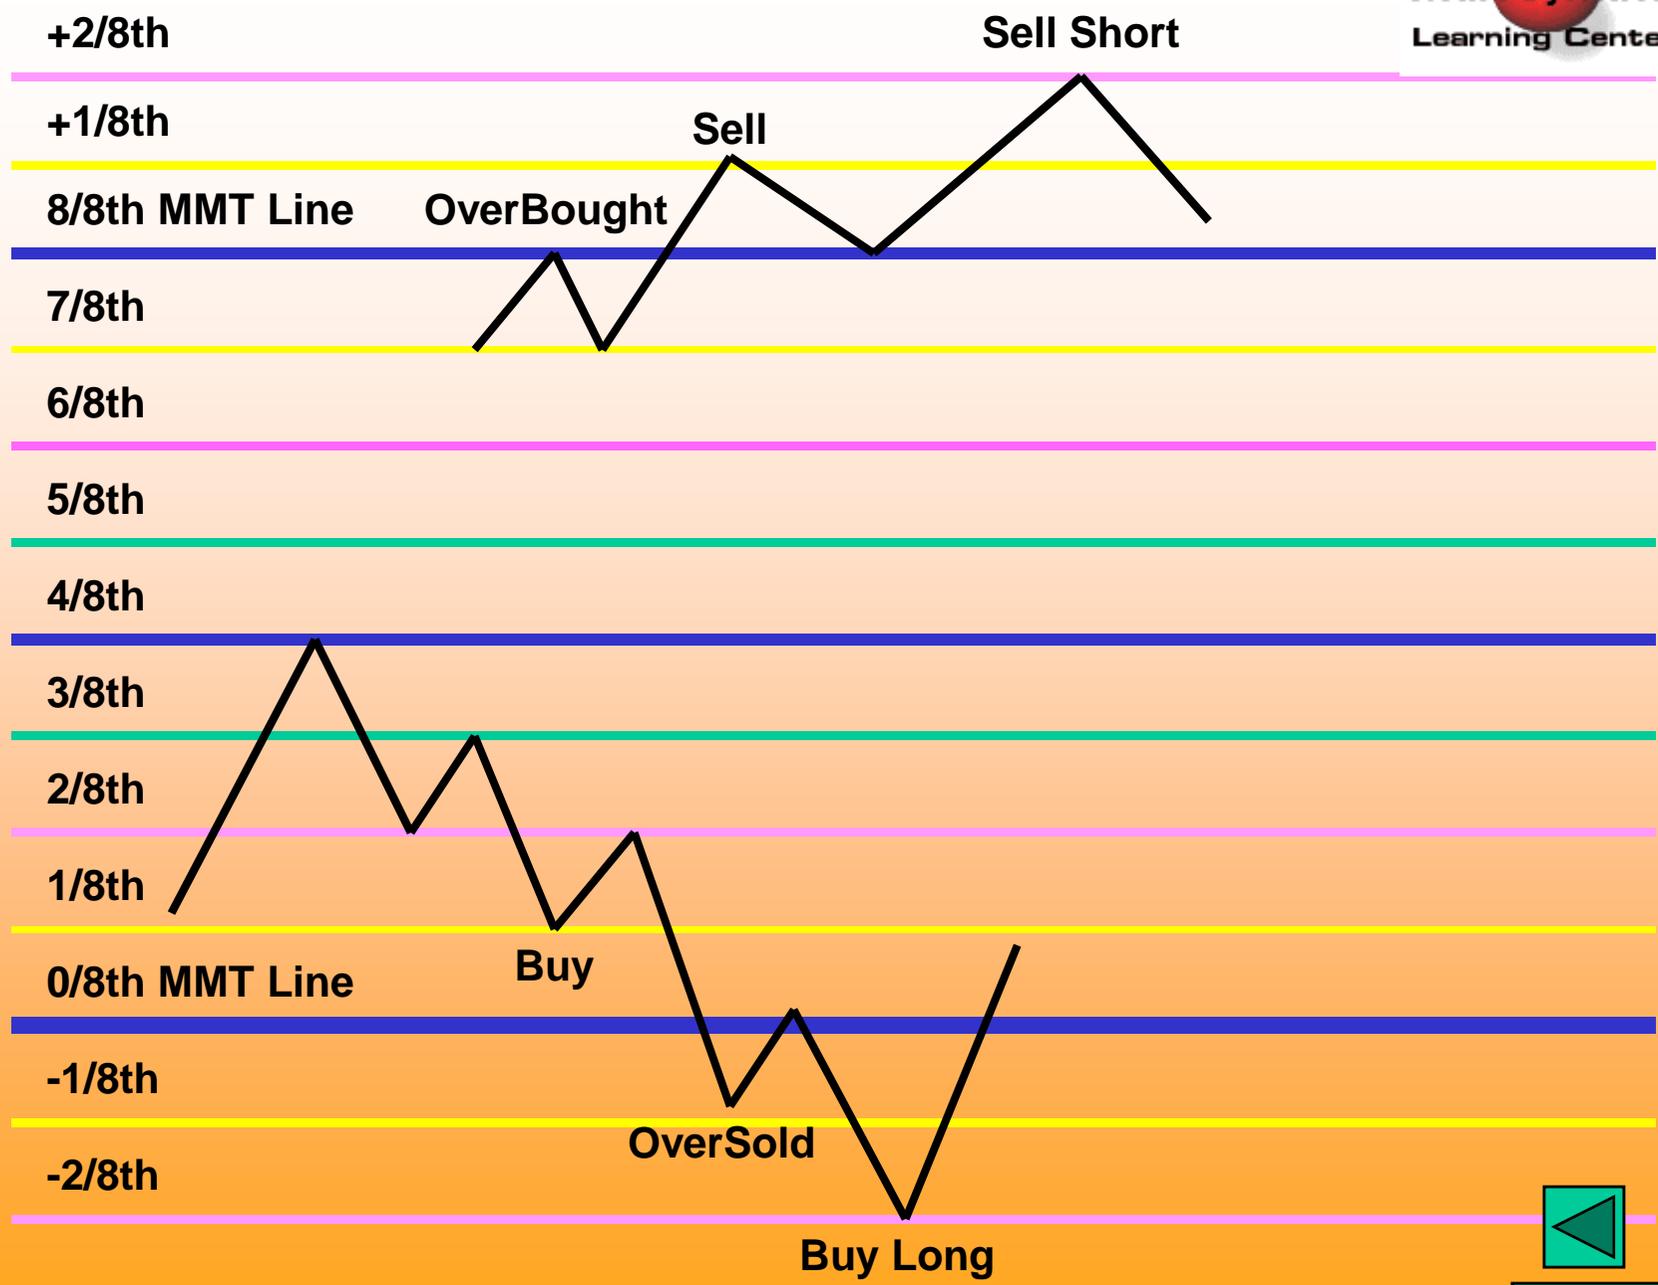

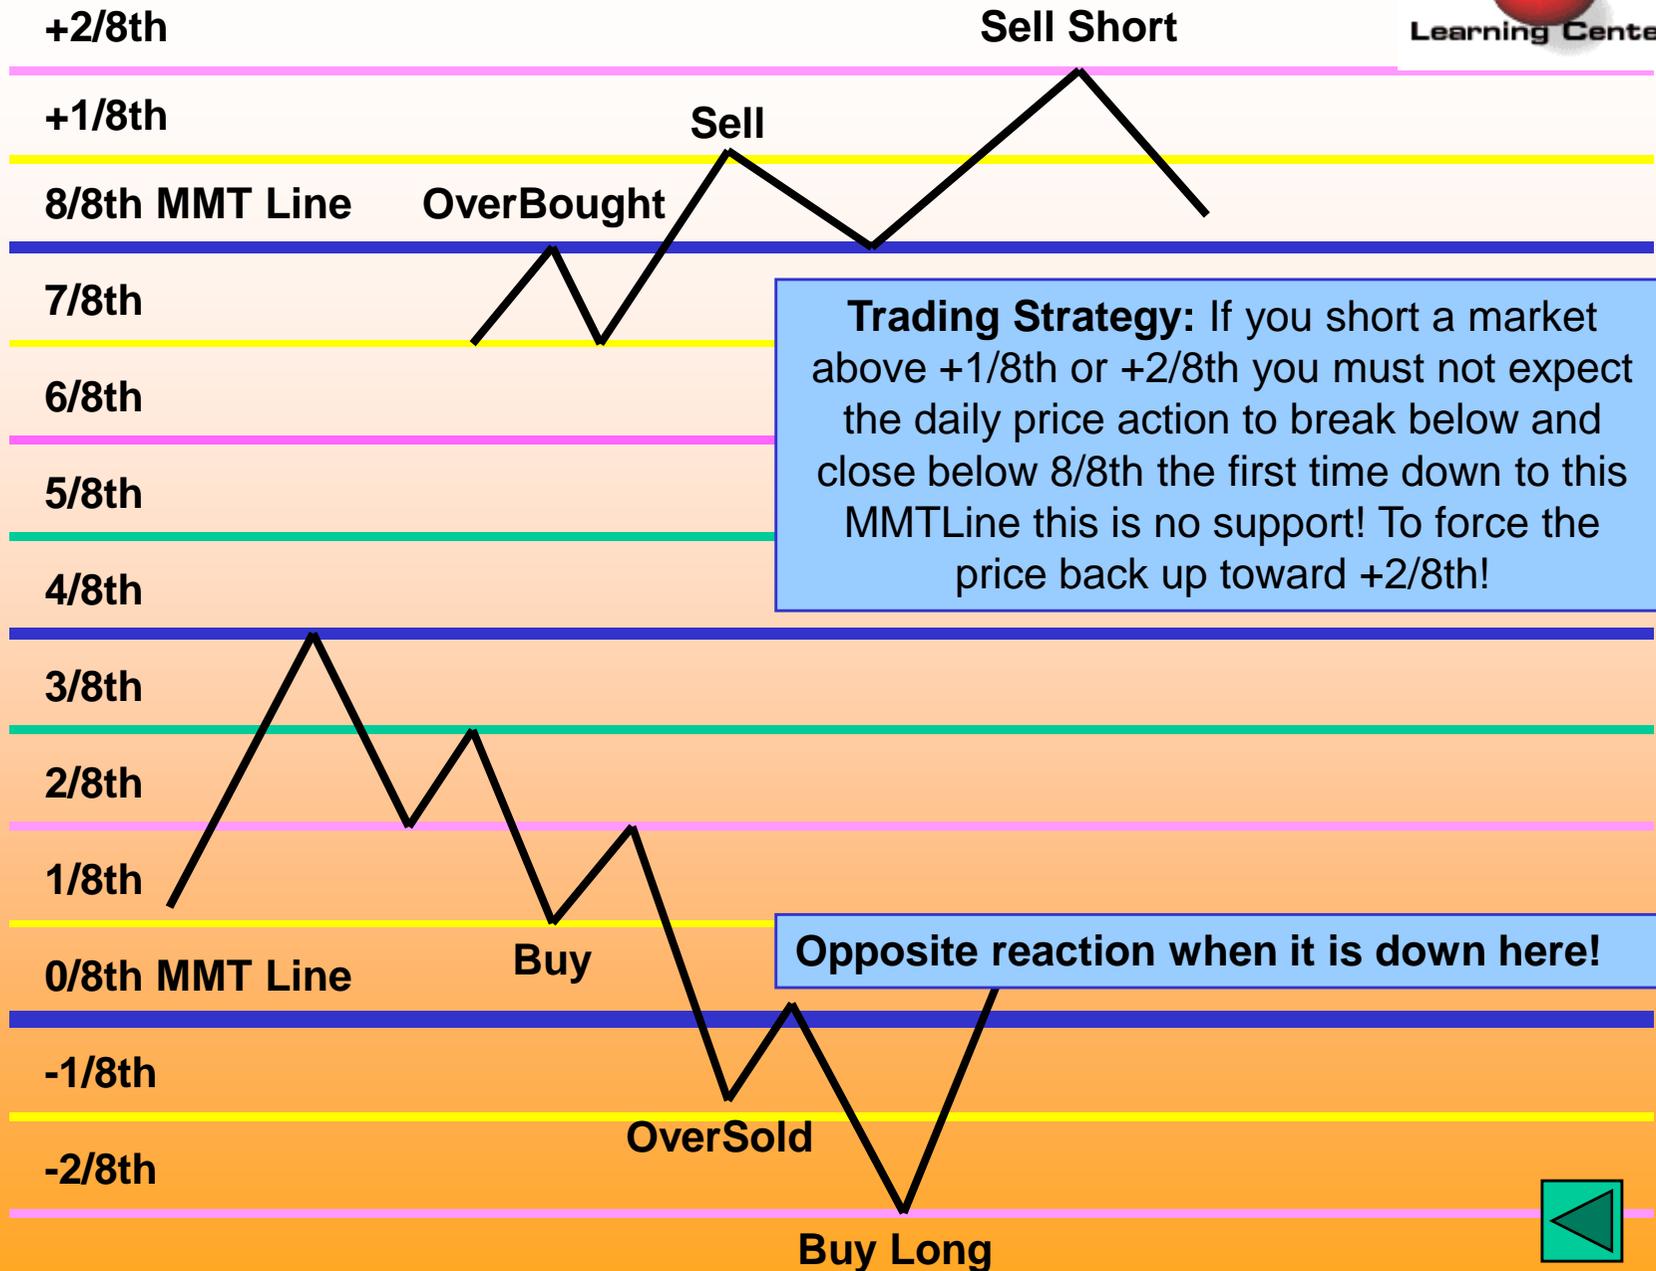

[Table of Contents](#)

+2/8th above Octave

95% of the time any market moving above +1/8th will reverse down up at +2/8th the 1st time up here

Horizontal Lines

All markets must consolidate and compress and build the strength to explode out into the next trading Area inside its Internal Octave 8/8ths, but they must earn the right to push up into the next Area and out of the Consolidation area Many markets reverse the 1st time they close up on the 3/8th Line which is the Ceiling of this Area (and the bottom of the next higher Trading Area inside its 8/8ths)

There is no guarantee any stock will move above this trading area. No market can make it back to any “old highs” before it proves its worth by closing over it’s 3/8th MMTLine 4 days in a row!

Why dream about “old highs” or “higher highs” until your market closes above 3/8th line?

Automatic Trading Strategy:

Trading Strategy: Don't plan to make more than small higher profits.

A) Over Bought = Sell "Short"

Too High in Price and wants to fall lower

The software program will automatically decide for you if a market is Over Bought or Over Sold, and automatically display the Trading Strategy whenever the Daily Price Action enters into either of these two areas.

Trading Strategy: Don't plan to make more than small lower profits.

B) Oversold = Buy "Long"

Too Low in Price and wants to move higher

There are two ways to make profits trading any market:

A) Buying Long (expecting a market to move higher short-term),

B) Selling Short (expecting a market to fall steeply short-term).

The Stock Market goes up 70% of the time (in total days) but more “fast profits” are made in quick, steep, falling markets so you must learn to trade both sides of all markets.

Jan 4th 1998 through July 15, 1998 the S&P 500 Cash Index moved up +7/8th inside our MMTF Internal Octave and made +20% for most mutual funds, then 7 weeks later every “greedy” Buy and Hold trader lost it all!

The software will assess **100 stocks** in **30 seconds** and set up their Trading Frame with only one click of the mouse on the directory's name.

**Every Trader has been taught to
"Buy Low" and to "Sell High"**

BUT THEY WERE NEVER TOLD WHERE EITHER END WAS TILL IT WAS OVER!

**Our software lets you "see" our
markets lower support and upper
limits (resistance) without having
to figure anything.**

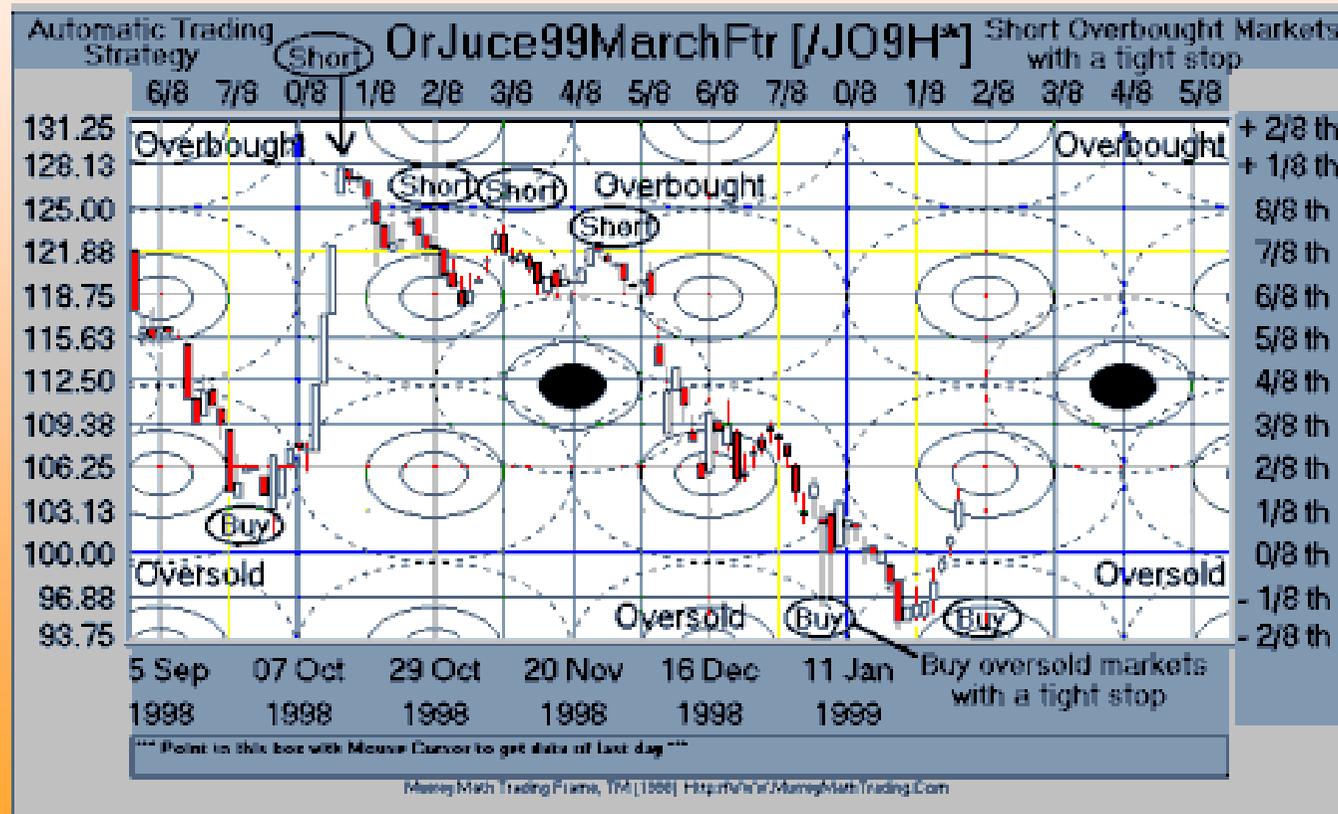

**Why try and reinvent the wheel?
Or out figure the deal?**

Table of Contents

Our software does all the "mental thinking" for you and places each market in its own unique trading frame!

This market ran up to 128.13 and became overbought, then it fell hard and fast down -10/8ths and then reversed off our -1/8th MMTLine when it got oversold.

No market wants to move more than (+) or (-) 2/8ths inside its Harmonic Octave 75.% of the time (then it wants to reverse). And if it moves 3/8ths (up or down) the odds are 93.% that it will reverse (directions) for at least one trading day (even if it reverses and continues its current trend).

Too many "wanna-bee" traders will wait till "confirmation" is confirmed (and it is already up or down (2/8ths) then enter and wonder why they are always missing most of the move or getting "whip-lashed" by having it reverse and come back against you too often.

These lines: (Even) lines "predict" pivot reverses more often than any set of lines: for one simple reason: Fibonacci Ratio.(1.125%).

*The more accurate Ratio is the Murrey Math Rate Percent Movement:
(set inside our Square).(more about this later).*

Table of Contents

There are only four squares any market in this world has ever traded inside and they are: 100, 1,000, 10,000 and 100,000.

We don't want to (presently) get into how these percentages (1.125) "predict" expansion and contractions off present levels but they do.

All we want to do is "see" any market move up or down to one of our even lines and close (for the day) right on the line (or within 19 or 39 cents from the line): then get ready for it to reverse the next day.(experienced traders follow another route) (later).

The 0/8th, 4/8th, and 8/8th MMTLines are harder to penetrate, so we would expect to "see" reverses occur off these lines.

Common sense rules our logic, so, the distance traveled (the longer the better) will also "predict" our best odds for a reversal.

Table of Contents

The 0/8th and 8/8th MMTLines are the top and bottom of the Harmonic Octave, so we would expect these lines to hold (stall or reverse) any market the 1st time it approaches (up or down). These horizontal MMTLines are always pre-set (by the software) as soon as the high / low daily trading range extremes fall into one of our Harmonic Internal Octaves.

One should strive to learn and memorize these horizontal MMTLines. Serious traders want everything to be automatic (under pressure). No great quarterback ever stopped the play to look down at the lines on the field.

Please remember these lines as pivot lines that reverse after 2/8ths runs more often than other lines, so we would look for markets that stall out (close) on these lines.

Price Percentage Moves for stocks over \$12.50

(we must break up these price - range stocks into each of its smaller squares below 12.50)

C) \$3.1/8, to 1.56, (1/8th equal 19 cents)

2/8th	50% of the time =	39 cents
3/8th	75% of the time =	57 cents
4/8th	90% of the time =	78 cents
5/8th	95% of the time =	97 cents

Price Percentage Moves for stocks over \$12.50

(we must break up these price - range stocks into each of its smaller squares below 12.50)

D) \$1.56, to zero, (1/8th equal 19 cents)

2/8th	50% of the time =	39 cents
3/8th	75% of the time =	57 cents
4/8th	90% of the time =	78 cents
5/8th	95% of the time =	97 cents

Trading Frame Software

Common sense says that our smallest 1/8th inside square of 100.0, shall be .1953125. So, let's start there and multiply this 1/8th by 1.125%.

.1953125	x	1.125% = .024414
1.5625	x	1.125% = 19.5 cents
12.50	x	1.125% = 1.5625
25.00	x	1.125% = 3.12
50.00	x	1.125% = 6.25
100.00	x	1.125% = 12.50

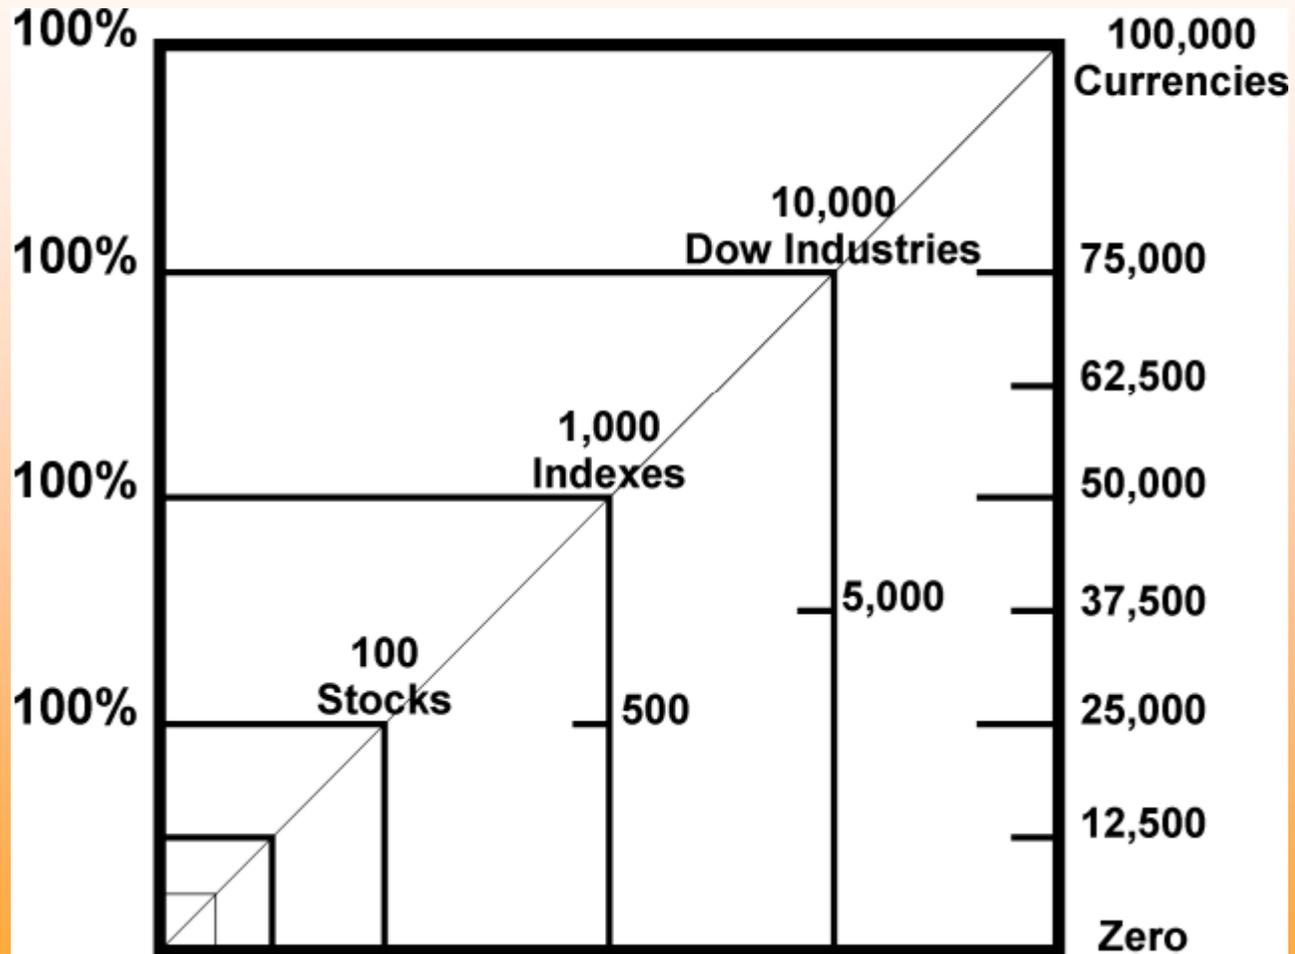

Common sense tells us that the next square out from 100.0, would be 1,000.0, so we would expect to multiply $15.625 \times 1.125\% = 1.953125$, which is the smallest 1/8th rhythm, for any stock, or Index trading above 250.0. We don't shift our rhythm, up, to the 1,000.0 square until we move above 250.0 so we must stay down on the 1/8th "Harmonic Rhythm" for stocks that trade inside the square of 100.0.

TM 1998

Trading Frame Software

Further Explanation

Every fall (right on the 1st frost) our software resets our Trading Frame.

We may expect the greatest reverses to occur on:

0/8ths, 2/8ths, 4/8ths, 6/8ths, and finally starting over on 0/8ths.

As any market runs into its Trading Frame:

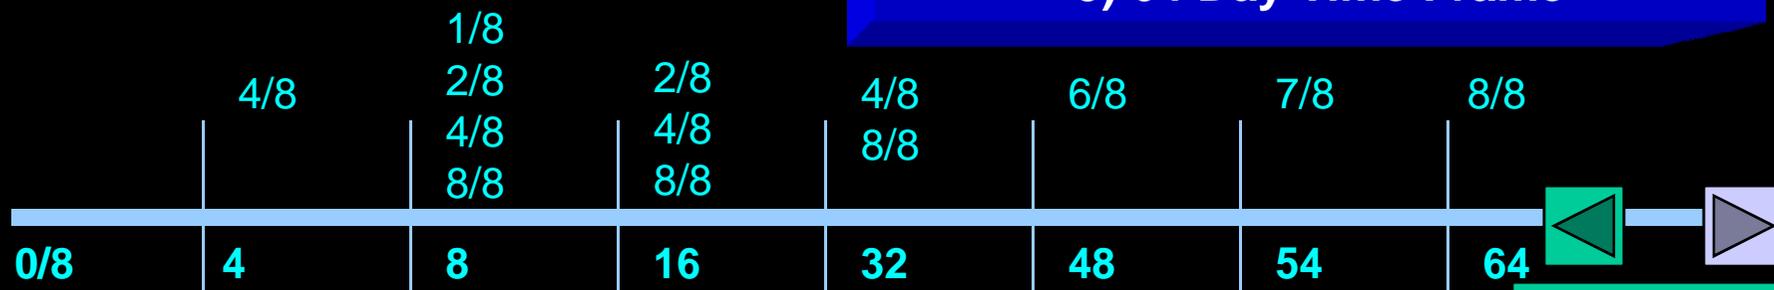

1) 4 Day,

2) 8 Day,

3) 16 Day, (normal trading frame)

4) 32 Day,

5) 64 Day Time Frame

[Table of Contents](#)

MurreyMath

TM 1998

Trading Frame Software

Further Explanation

16 is normal for stocks, Bonds, and Indexes, and 32 is more normal for Commodities.

The most critical reversal day is 6/8ths inside the Trading Frame.

We must switch back and forth between more than one Time Frame to get the closest Trading Frame that gives us the best feel for our projected profits.

Some students say, "Well what do we do if it reverse off: 1/8th, 3/8ths, 5/8ths or finally 7/8ths?"

Trading Frame	4	3
	8 Breakout Day	6
	16	12
	32	24
	64	48

1 x 2 x 2 x 2 x 2 Trilogy Times Itself

3 6 12 24 48

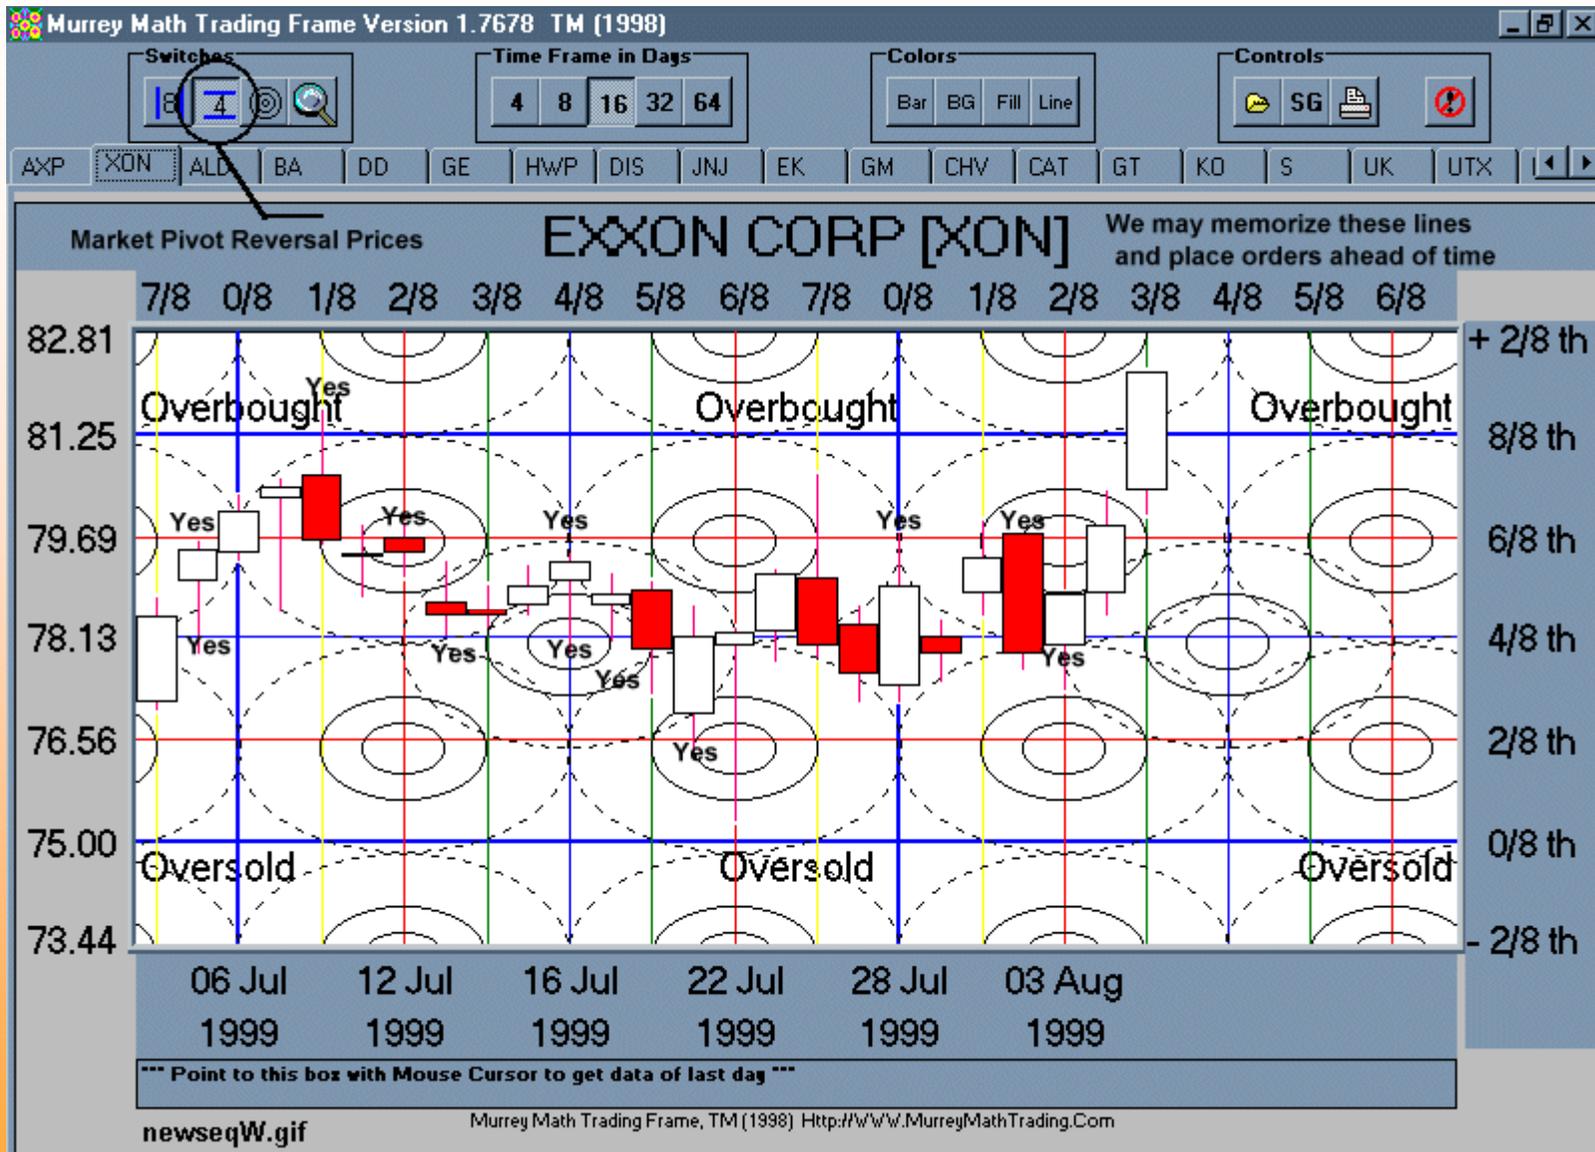

Table of Contents

I would suggest that you reverse positions!! (simple enough).

There are two reasons why markets want to reverse off a multiple of four days:

- 1) The Earth is set to three days of magnetism and one day of neutrality set off the 1st Frost (each fall): Earth's Resonation expressed in the Van Allen Belt.**
- 2) The S.E.C. requires all trading brokerage houses to return monies after three days when a sale (Long or Short) Position is executed.**

So we "see" that the S.E.C. is setting its own Harmonic Rhythm inside our Trading Frame, which (at extreme highs or lows) will run out of liquidity for a few days, so we would expect reverses.

- 1) The Earth is set to three days of magnetism and one day of neutrality set off the 1st Frost (each fall):**
- 2) The S.E.C. requires all trading brokerage houses to return monies after three days when a sale (Long or Short) Position is executed.**

Too many other so-called "gurus" will look at our Time Lines and laugh at us for trying to "predict" Time Reversals off setting up only one Starting Point and moving forward to the right (until the end of the trading year).

Some "gurus" laugh that my Time Reversal (Vertical) Lines are only 75.% accurate (with a standard error plus or minus of two days) but they fail to know how to put the pieces together for trading through time we set a speed angle (up or down) to "catch" reverses that don't "hit" right on the "exact" Day.

No sane human can expect our software to "predict" Time Reversals before they get there (to any Vertical Time Line), but logic and common sense suggest that time Reversals shall occur inside each Trading Frame off our Even Numbers.

The speed lines and momentum lines catch reversals that don't reverse exactly on the MMTLine.

Since Mutual Funds must stay invested 95.% of the time (no matter which way the market is running), reverses are accelerated by

1) selling a portion of their "winners"

2) selling a larger portion of their largest "losing" positions.

[Table of Contents](#)

Reversal Days inside Trading Frame: (16) and (32) "predict" stronger "reactions" when a market trades these trading frames.

Please don't discard all our (9) trading rules and rely too heavily upon Time Reversals as the "Ultimate Predictor."

Time is not as important as you were led to believe.

Price Acceleration (up or down) in the shortest Time Period is the simplest way to make Trader's Profits from Trading, Price Change not Time Change is better.

You are told that you should "hold" longer or become a "position" trader who is satisfied to "give up" short-term profits" by Hoping and Praying it will always reverse and move more in your direction.

Finally, it is better to know something might happen on any certain day (and it not happen) and to prepare for it, so we must always be thinking Price Change (profits) in the shortest period of Time.

[Table of Contents](#)

Please start counting from any reversal (low or high) and come forward (to the right) and see if the move to has run in one direction 3/8ths or 5/8ths in Time !?

The maximum price movement (in the shortest period of time) is our goal.

Old Anniversary Dates are significant to our "trading mentality" but price reversals in distance in price are always more profitable than "waiting" six months to have any rule fulfilled (or not).

Most important is the 3/8th / 5/8th "profit" rule.

History always repeats itself but let's trade today and let the "gurus" (who don't trade predict the future).

Never fly in a plane with a pilot who won't get off the ground!

87.5% of all "students" in any "classroom situation" expect the "teacher" to be "perfect" in their prognostications, but they will fail to do two things:

1) "respond" and enter a trade

2) leave and go to another "guru" who will "promise" something to happen way out in the future.

[Table of Contents](#)

Never start thinking any farther out (into the future) past (64) Trading Days. (unless you are thinking about "old highs or lows").

Human Nature being what it is, anyone who promises to tell you what will happen out past (64) Trading Days, is a "guru" who can't trade today (because they are always going to tell what will happen next: week, month, year!

Our President in 1929 promised two things: 1) Chicken in every pot and every child a high school degree. We're just as dumb today as when we were promised every child a college degree.

Who cares? If you don't have any money on the line (backing your prediction).

Example: 1929 High the S&P 500 Cash Index (set to the Murrey Math Trading Frame) said this market was Overbought (up on its $+1/8$ ths) price line above its Harmonic Octave but the Time Line reverse happened when it did and not since then has anyone seen a direct correlation between this day and the last reversal this past fall.

After you "cleanse" your mentality of trading off Time and back on amounts of cool cash, you will want to trade more and enjoy it more.

W.D. Gann predicted crash: Month, Week, Day, Time but no one listened to him!

[Table of Contents](#)

Last July 9th, 1998, I told everyone to close out their "Long Positions" because it was situated in a three-way negative (positive) sell signal:

- 1) market up + 7/8ths inside its Trading Frame,
- 2) market moved up too steeply the last 3 months,
- 3) plus, the old highs were "exactly" (6) months ago.

No one listened to me! Greed controlled their souls!

What did you do ?

Only one-half of one percent of all mutual fund I.R.A. participants ever move any of their funds into a "safer profit-preserving" Money Market Fund, so you might expect most of what I ever say to fall on one ear that is "afraid" and one "deaf" to logic and common sense (that markets don't go straight up).

[Table of Contents](#)

Your ability to separate yourself from your friends, "gurus" and newest experts and their "let it take care of itself attitude" and how fast you do it, will be the largest factor that takes you toward the "gratification" that you did not spend time waiting for the future to be the past (so you could look back and say how you would have reacted) and you affect your own future "predictions" off "present-day" trading.

Woulda, coulda, shoulda traders join more groups to give them more information when trading needs only 3 rules!

[Table of Contents](#)

#5) Reverse Lines: Pivot Reversals: 0/8th, 2/8ths, 4/8th, 6/8th,an/or 8/8ths:

Inside the Murrey Math Harmonic Octave Trading Frame:
0/8ths to 8/8ths (automatically set by software) any market in your directory !

Please look at the attached chart (BA) Boeing Aircraft.

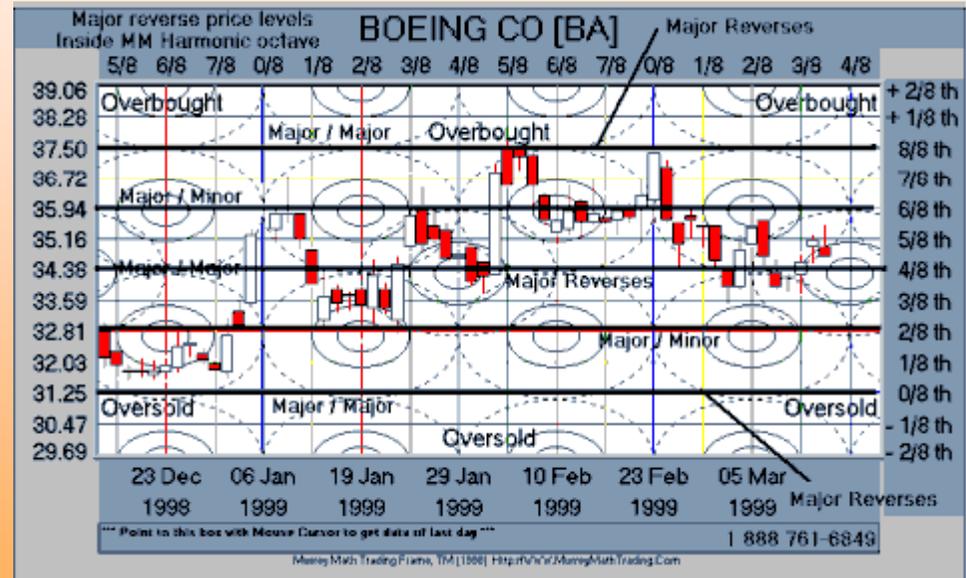

Major Reversals Inside:

8/8 - 0/8

then 4/8th

then at 2/8 - 6/8

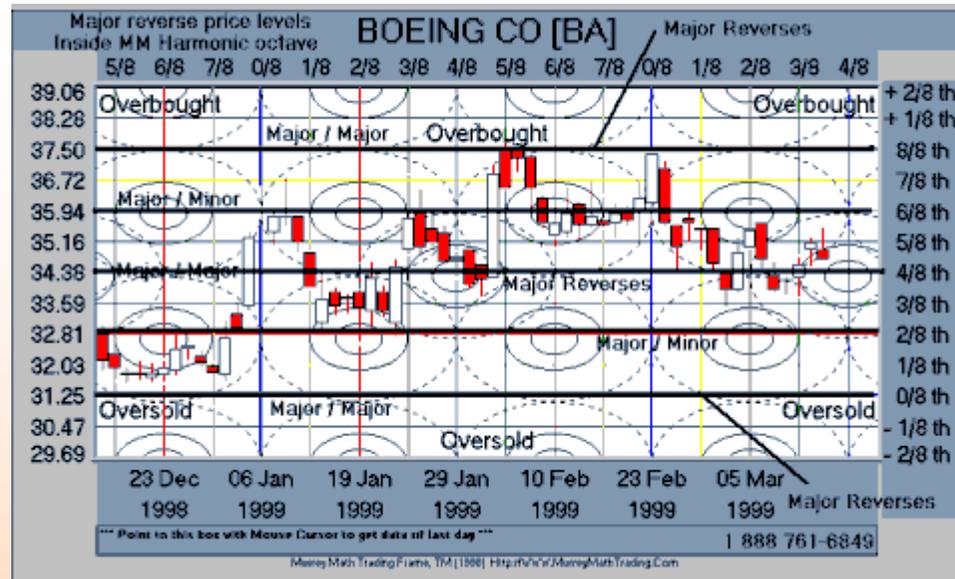

then at +2/8 or -2/8

This stock is reversing off its Internal Murrey Math Lines: 0/8ths, 2/8ths, 4/8ths, 6/8ths, and 8/8ths: (as an exponent of the Law of Distribution): inside the Harmonic Rhythm Octave (set to the Base of Ten).

[Table of Contents](#)

The human body is divided (at conception) by Binary Math: Starting as a circle/sphere, then as a cube, then as a rectangle 1, 2, 4, 8, 16, 32, 64 cells etc., until you end up (as beautiful or ugly as you perceive yourself).

All markets are set to the same Binary Math: MMTLines (but our software does it all automatically for you (if you just make one click of the mouse)).

Looking at this chart (or any chart) you will "discover" through (sight-recognition) that the odds are "pre-set."

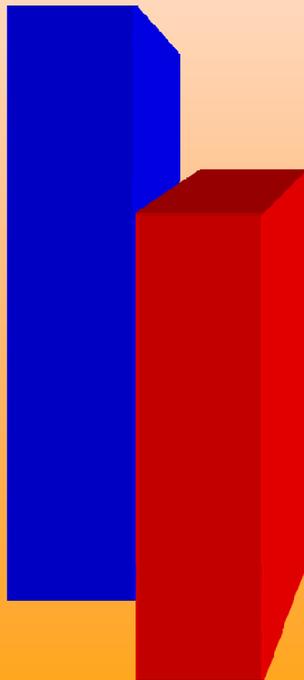

Table of Contents

Murrey Math Trading Rules: (apply to all markets):

#2: Volume of today's market versus yesterday's volume?

(difference at any high or low range of more than 25.%)

This lower or higher volume will often signal a reversal or direction signal.

#3: How far has this market run (up or down) currently in 1/8ths?

The 3rd most important trading factor to keep in mind each day.

Please don't waste screen space looking at volume back past yesterday. It's useless!

MurreyMath

TM 1998

Trading Frame Software

Murrey Math Trading Rules:
(apply to all markets):

#5:

Where does this market enter the trading frame ?

Where any market comes into the trading frame determines how much (%) you will make from a reversal up or down.

Profit Potential for markets reversing and moving up off last Low: (coming into the Trading Frame):

+ 2/8ths This market may reverse either way so wait for reverse (rare)

+ 1/8ths = 1,

Top 8/8ths = 1,2

7/8ths = 1,2,3

6/8ths = 2,3,4

5/8ths = 2,3,4

4/8ths = 3,4,5

3/8ths = 4,5,6

2/8ths = 5,6,7

1/8ths = 6,7,8

Zero/8ths = 7,8,9

- 1/8ths = 8,9,10

- 2/8ths = 9,10,11 these are the upside potentials for profits (Long).

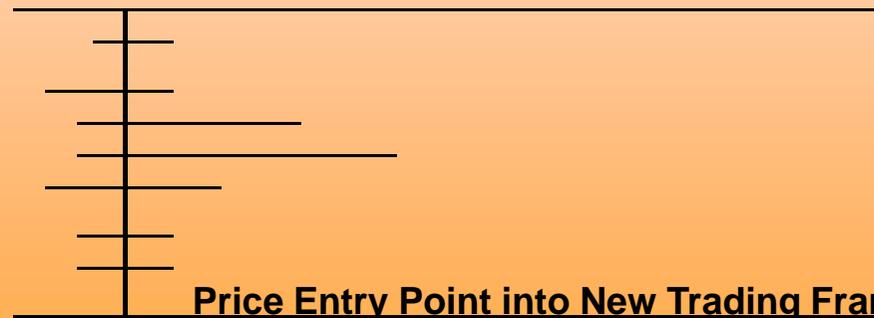

Table of Contents

MurreyMath

TM 1998

Trading Frame Software

Murrey Math Trading Rules:
(apply to all markets):

#5: Where does this market enter the trading frame ?

Too many traders think any market will move back to old lows or highs but they must move through any +2/8ths or -2/8ths and hold at this price for four days in a row or move past these MMTLines by an additional 30 cents.

Slide 363

Profit Potential for markets reversing and moving down off last High:

+ 2/8ths = 9,10,11 this is the upside potential for profits (Long).

+ 1/8ths = 8,9,10

Top 8/8ths = 7,8,9

7/8ths = 6,7,8

6/8ths = 5,6,7

5/8ths = 4,5,6

4/8ths = 3,4,5

3/8ths = 2,3,4

2/8ths = 2,3,4

1/8ths = 1,2,3

Zero/8ths = 1,2

- 1/8ths = 1,

- 2/8ths = This market may reverse either way so wait for reverse (rare)

Table of Contents

#5: Where does this market enter the trading frame ?

Please keep in mind the last run length and whether it was up or down. You may expect to get resistance at 37.5%, 50.%, or 62.5% of this last run and it will want to stall-out and stop against these ratios. Especially if they also match up on a MMTLine. This is all the past history you need till any market breaks above or below it's old highs or lows.

MMTLines are more predictable.

- + 2/8ths This market is too high and will be monitored closely?
- + 1/8ths = Over Bought (Too high on enthusiasm)
- Top 8/8ths = Upper end of the Octave (wants to stay in here)
- 7/8ths = Weak Fast Reverse Line
- 6/8ths = Pivot Reverse Line
- 5/8ths = Upper Trading Range (Comfortable trading in here)
- 4/8ths = 50.% = hardest to break through (up or down) the 1st Time
- 3/8ths = Lower Trading Range (Comfortable trading in here)
- 2/8ths = Pivot Reverse Line
- 1/8ths = Weak Fast Reverse Line
- Zero/8ths = Lower End of Octave (wants to stay in here)
- 1/8ths = Oversold (Too high on enthusiasm)
- 2/8ths = This market is too Low and will be monitored closely?

MurreyMath

TM 1998

Trading Frame Software

Murrey Math Trading Rules:
(apply to all markets):

#5: Where does this market enter the trading frame ?

All markets will want to trade inside its Trading Range Pre-set by the **Murrey Math Trading Frame Software Harmonic Octave** (3/8ths and 5/8ths) 43.3/4% of the time. If it gets up (ahead) of itself too far and moves up past its +2/8ths, (above 8/8ths) then the software and your brain will simply “**double**” the price action and set the Octave to the next higher set of numbers for the particular market you are currently trading.

MMTLines are more predictable.

But, if a market gets up ahead of itself (above its 8/8ths line) and can't breakout into the next Octave, it will come back down inside its trading range and try and balance out the advance (over time).

Table of Contents

MurreyMath

TM 1998

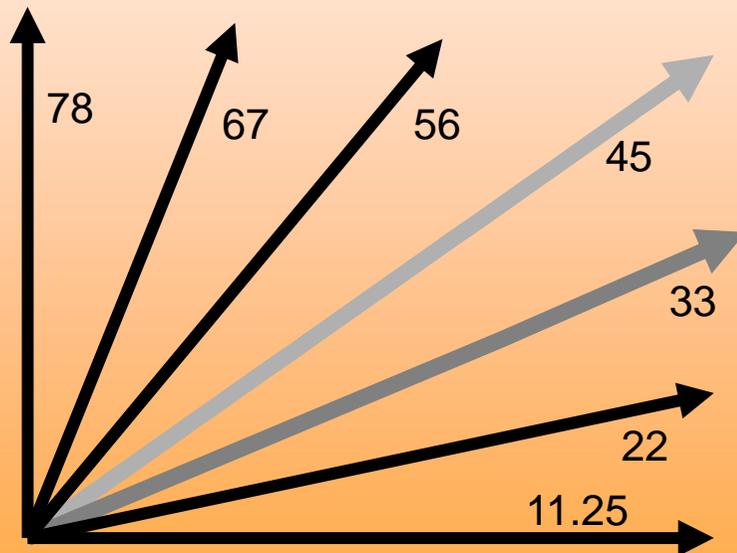

Trading Frame Software

Murrey Math Trading Rules:
(apply to all markets):

#5: Where does this market enter the trading frame ?

The normal speed angle of advancement through a square of 32 or 64 is a 22.5 degree angle (price appreciation) over time through our trading frame.

Slide 363

We should expect markets to run up along a 11.25 degree angled line in Trading Frames of (16).

All markets are subject to “run-ups” of 11.25 or 22.5 degrees, except the Indexes, which will want to run-up along 45 degree angled lines.

Table of Contents

MurreyMath

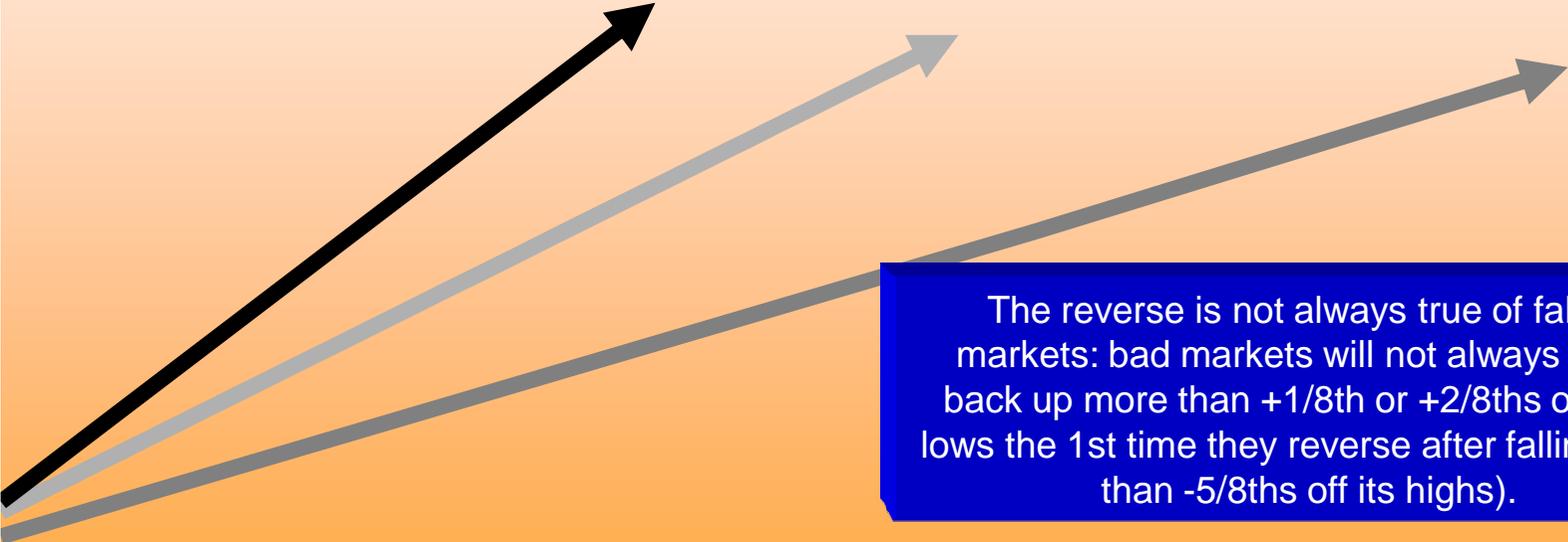

TM 1998

Trading Frame Software

Murrey Math Trading Rules:
(apply to all markets):

#5: Where does this market enter the trading frame ?

If any market comes into its trading frame at a rate of speed greater than 22.5 degrees of angle, it is said to be moving up too fast and it will have to come back down or “explode” into the next higher trading octave.

The reverse is not always true of falling markets: bad markets will not always come back up more than +1/8th or +2/8ths off their lows the 1st time they reverse after falling more than -5/8ths off its highs).

Table of Contents

#5: Where does this market enter the trading frame ?

We are looking to trade a market Long when it is reversing off its Horizontal MMTLine:

- A) Best odds potential = $1/8$ ths MMTLine
- B) 2nd Best odds potential = zero/8ths or $2/8$ ths MMTLines
- C) 3rd Best odds potential = $-1/8$ ths MMTLine
- D) 4th Best odds potential = $-2/8$ ths MMTLine

We are looking to trade a market Short when it is reversing off its:

- A) Best odds potential = $7/8$ ths MMTLine
- B) 2nd Best odds potential = $8/8$ ths or $6/8$ ths MMTLines
- C) 3rd Best odds potential = $+ 1/8$ ths MMTLine
- D) 4th Best odds potential = $+ 2/8$ ths MMTLine

You must learn this!! Sit up and Relax!!

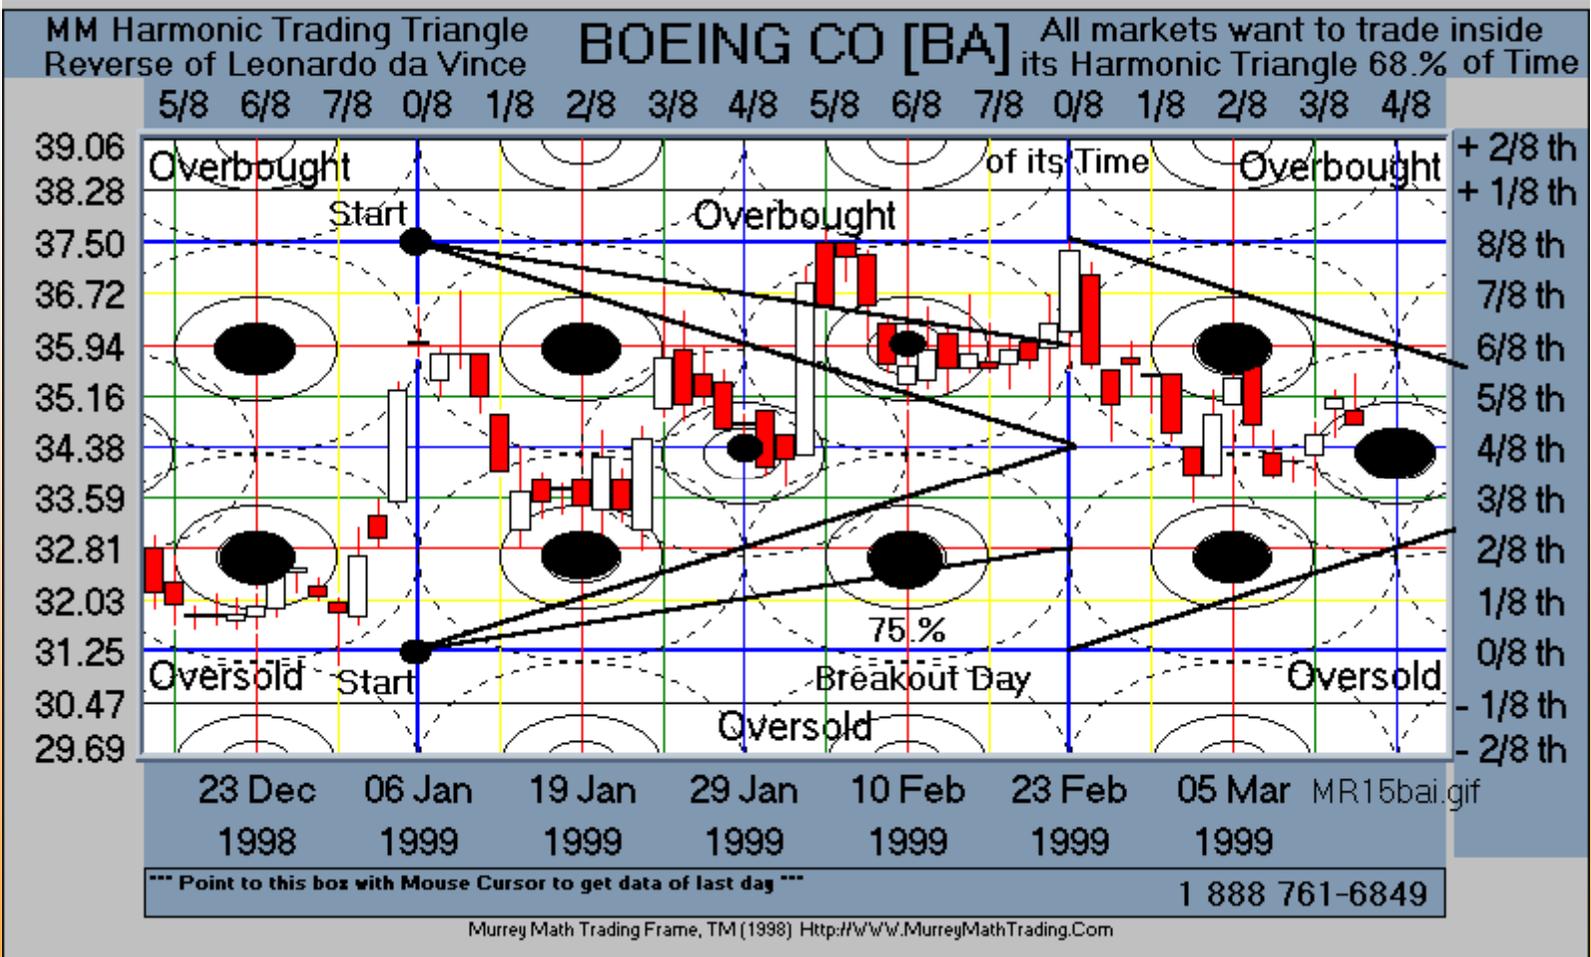

Table of Contents

#5: Where does this market enter the trading frame ?

“Whip-Lash” trading occurs most often when a trader wants to enter trades when a market is trading inside its Trading Range (3/8ths and 5/8ths).

You will not profit enough (%) and you will get “whip-lashed” reversed upon more often inside these (T/R) price ranges, so take smaller profits inside this area and expect only 1/8th or 2/8th profits until it finally rises above or below by more than a “baby” 2/8ths.

MurreyMath

TM 1998

Trading Frame Software

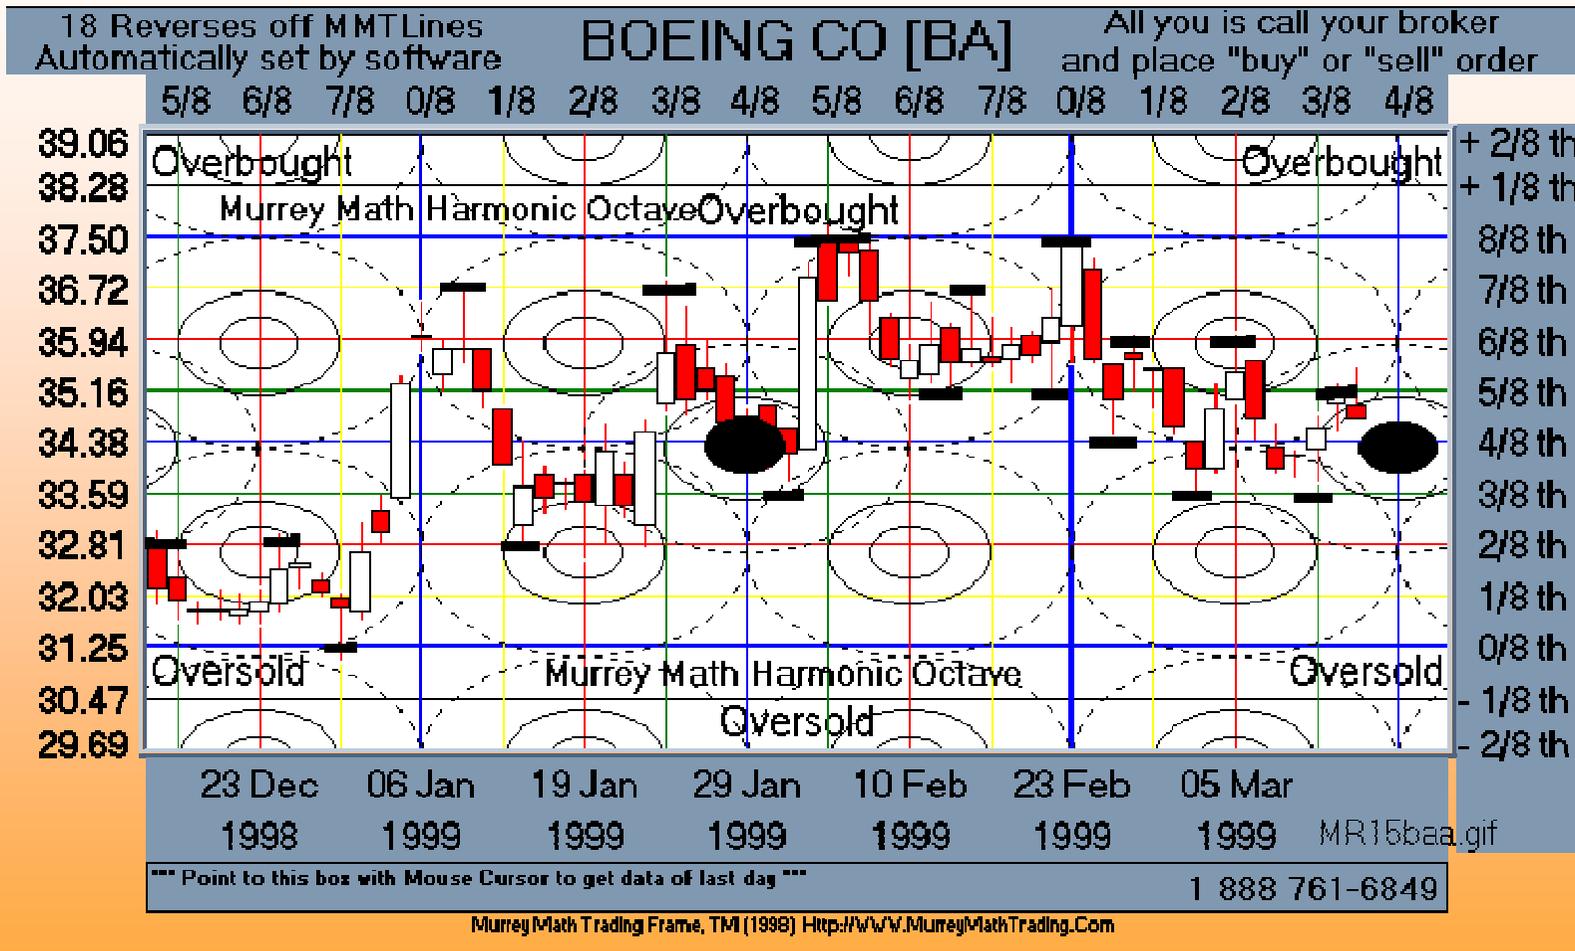

Table of Contents

MurreyMath

Trading Frame Software

TM 1998

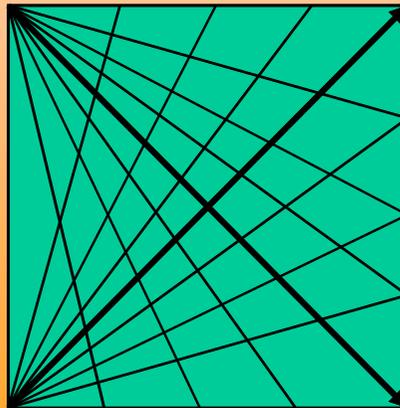

Murrey Math Trading Rules:
(apply to all markets):

#6: Is this market running up or down along a parallel “momentum line” ?

All “Momentum Lines” are longer term trend lines set up as price appreciation or falling prices along 45 degree angled lines started on either:

- A. Lower Left Hand Corner to upper right hand corner,
- B. Upper Left Hand Corner to lower right hand corner,

The software will automatically set these MMSpeed lines for you by simply pressing **Control+S** on the Keyboard.

Trading Strategy:

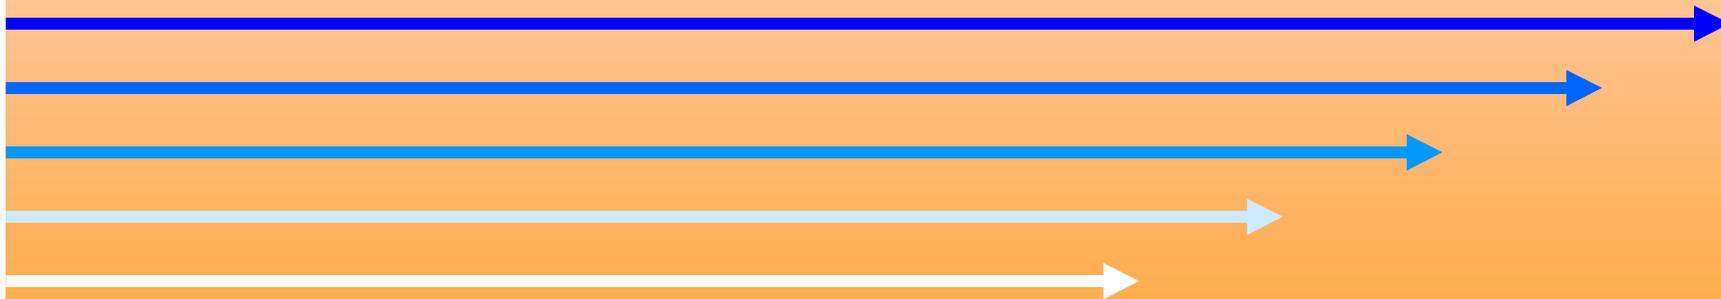

Enter positions off reverses (opens or closes) off these 7 (up or down) speediness.

Table of Contents

#6: Is this market running up or down along a parallel “momentum line” ?

We should expect any market that “starts” moving along any of these parallel lines to “memorize” these lines and to “step up” or “step down” or reverse against 90 degree angles into the future (off past angled moves) off the initial parallel price movement and to know where these parallel lines are into the future set to 25., 50., 75., or 100.%, into the next trading frame, but we should not expect this same parallel trading action to last much past three reverses off the same set of lines.

Trading Strategy: Reverses should not exceed two major lines (up or down)

What if reverses off dashed minor 50% lines?

Answer: Close and reverses fast!

Table of Contents

#6: Is this market running up or down along a parallel “momentum line” ?

We usually trade parallel lines set off:

1) zero/8ths, greater support,

2) 2/8ths,

3) 4/8ths, greatest resistance or support,

4) 6/8ths,

5) 8/8ths, greater resistance.

We usually don't use the angled lines: $1/8$ ths, $3/8$ ths, $5/8$ ths, $7/8$ ths, but when we do we shall get faster reverses, which are “minor 50.0%” reversal signals.

#6: Is this market running up or down along a parallel “momentum line” ?

There are two other angled parallel price momentum lines, we don't mention them very often because they don't occur very often. I will tell you about them but we won't include them in our software because they are mostly a waste of time. You will see them form sometime in the future, so we need to mention them and they are:

1) 22.5 degree angled lines, too slow, and

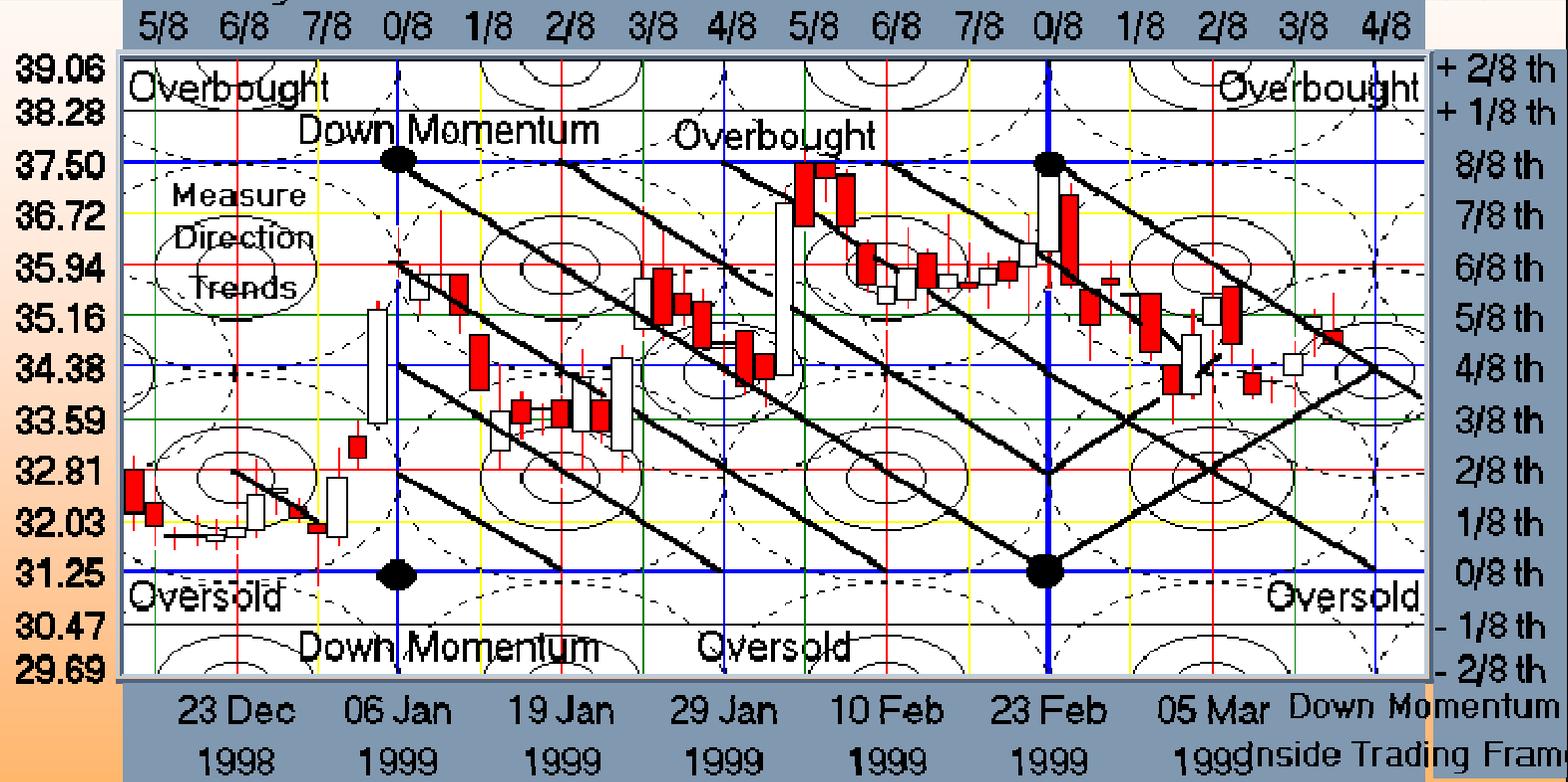

2) 56.25 degree angled lines are too steep and won't repeat more than once.

Table of Contents

#7: Where is the price in relation to the “Circle of Conflict” ?

A) Is it rolling over it?

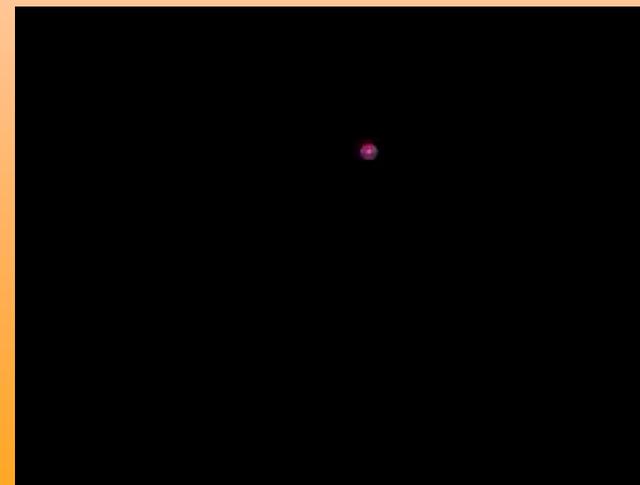

B) Is it curling under it?

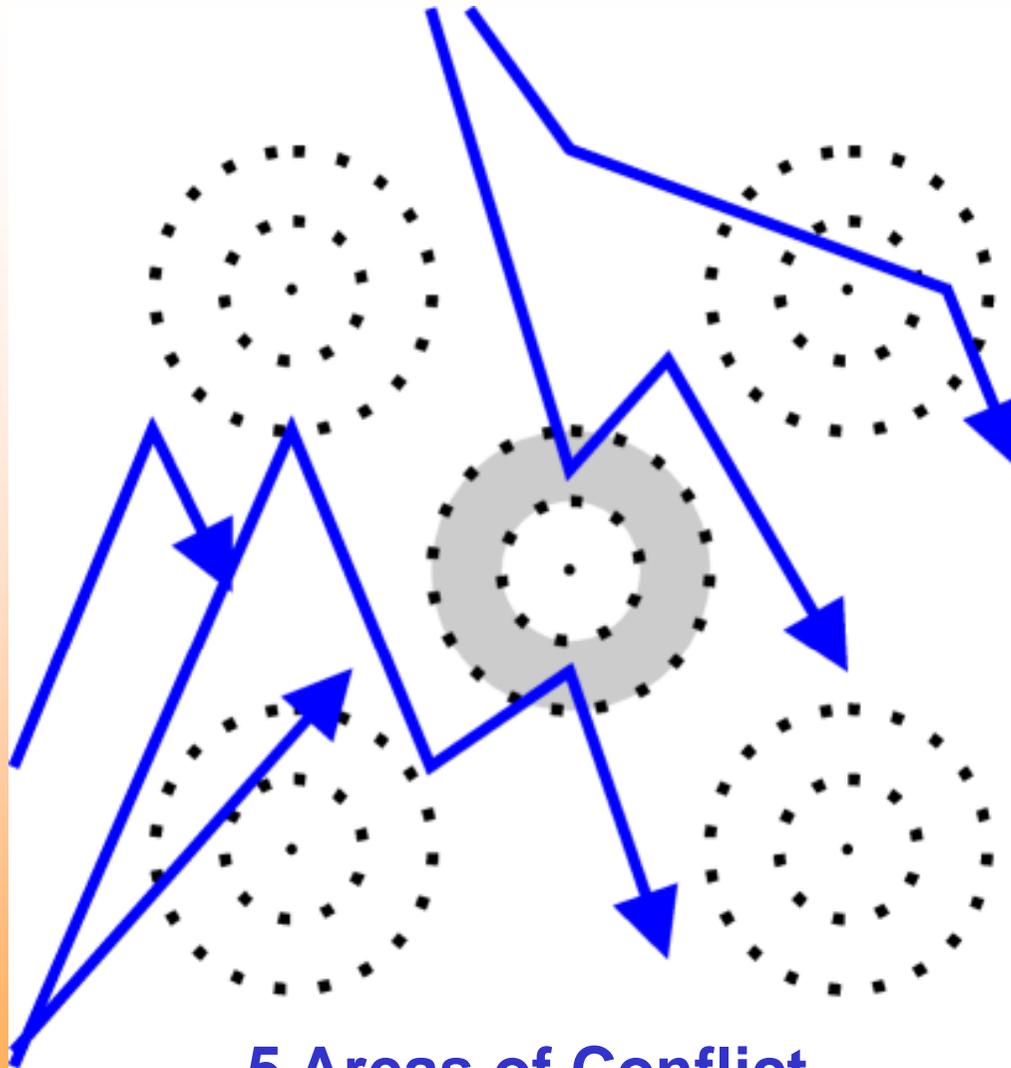

C) Will it move inside it?

The Circles of Conflict are “electrical” and will change “polarization” at its own will, so trying to figure it out is as simple as going with the direction it reverses off its “center” horizontal MMTLines (+ or - baby 1/8ths).

Two fastest reverse points inside circle:

- 1.) Center line- Take direction of the reverse.
- 2.) Center Price - Take price 19 04 39 on other side of the center line.

5 Areas of Conflict

Stock wants to avoid these mental cluster areas through time.

Murrey Math Trading Rules:
(apply to all markets):

#9: Look at the (3) Time Trading Frames:

16 days

32 days

64 days

Now focus in as close as possible on what gives you the most precise (accurate) horizontal price lines that will allow you to set your 1/8ths so that they let you "see" the last trading range of high / low as it fits inside the smallest 8/8ths.

We need to think in terms of these (9) simple rules that assist us in our predictions for market trading the next day !

No set of Trading Rules is ever 100.%, so we should be ready to reverse our positions when any market does not go our way (especially intra-day). We must already know how little we expect to lose if it reverses against us.

Table of Contents

MurreyMath

TM 1998

Trading Frame Software

These four trading frame squares shall frame every market's Harmonic Rhythm Internal octave. Markets below 12.50 shall fall into sub-harmonic internal octave.

Each 1/8	2.4414	4.88	9.88	.1953125	39.5	78.5	1.5625
	8/8	8/8	8/8	8/8	8/8	8/8	8/8
	19.53125	39.5	78.	1.5625	3.125	6.25	22.50
	0	0	0	0	0	0	0
	1	2	3	4	5	6	7

Never expect any market at trading below one of these 8/8th after it closes above any 8/8 simply double your maximum price expectation up only to the next closest 8/8th

Table of Contents

MurreyMath

TM 1998

Trading Frame Software

Murrey Math Trading Rules:
(apply to all markets):

#10: Setting our Murrey Math Trading Lines:

A	zero to 100.:	1/8th =	12.50 = 1.5625 = .1953125,
B	250 to 1,000:	1/8th =	125. = 15.25 = 1.953125,
C	2,500 to 10,000:	1/8th =	1250 = 156.25 = 19.53125.

Special Situations:

Gap Over:

This is where a market price gaps over a MMTLine (horizontal), which would signal that this market ignored the MMTLine, so we must expect it to run toward the next MMTLine, but we must always count how far any run has run to predict its continuation in direction.

These four trading frame squares shall frame every market's Harmonic Rhythm Internal octave. Markets below 12.50 shall fall into sub-harmonic internal octave.

Table of Contents

#10: Setting our Murrey Math Trading Lines:

A	zero to 100.:	1/8th =	12.50 = 1.5625 = .1953125,
B	250 to 1,000:	1/8th =	125. = 15.25 = 1.953125,
C	2,500 to 10,000:	1/8th =	1250 = 156.25 = 19.53125.

Special Situations:

Drive-thru:

is a term that describes any market that pushes through any MMTLine on an intra-day trading basis. If it drives through more than 40 cents past (or 2/8ths plus 2 cents) the MMTLine, it should move on toward the next MMTLine.

#10: Setting our Murrey Math Trading Lines:

A	zero to 100.:	$1/8\text{th} =$	$12.50 = 1.5625 = .1953125,$
B	250 to 1,000:	$1/8\text{th} =$	$125. = 15.25 = 1.953125,$
C	2,500 to 10,000:	$1/8\text{th} =$	$1250 = 156.25 = 19.53125.$

Special Situations:

"S" Move:

is an intra-day move where a market forms an "S" laid on its side and it undulates either:

- 1) on a MMTLine, or
- 2) just below a MMTLine, or lastly it
- 3) it moves on either side of a major MMTLine, which could even form a double "S" before it breaks out in its own mind's direction.

Please commit these simple rules to memory.

When you learn them you will expect to trade better and earn more per trade.

Failure to remember one of these rules will result in one of two realities:

- 1) fast, free profits will erode too quickly, or
- 2) you will enter a trade and it will go against you and you will have to “cover” your losses and the failure syndrome will creep into your mind.

MurreyMath

Trading Frame Software

TM 1998

**Murrey Math Trading Rules:
(apply to all markets):**

**Thanks for joining the Certification Classes of the Murrey Math
Trading System.**

How fast you “change” your trading “habit” is directly proportional to your ability to move past five outside forces:

- 1) news,**
- 2) so-called knowledge,**
- 3) desire for a good life,**
- 4) risk avoidance.**
- 5) Factors in psychology state that a “new stimulus” will excite “rookie traders” who will trust any new indicator but long term stable traders rely on 3 simple rules measured inside our MM trading frame.**

**Murrey Math Trading Rules:
(apply to all markets):**

Thanks for joining the Certification Classes of the Murrey Math Trading System.

These rules are to never be printed and reproduced for the "masses" (who want only one rule to trade any market). Besides this is too simple for the "gurus" out there now.

Trading is a dying art form that is accessible to only a rare few individuals who have the mentality to move past the mundane words blasted at you each day, telling you that you can't do it or see it.

Trading Frame Software

There is no Random Market Trading Action. Every Market is trading inside an Internal Trading Octave. The Murrey Math Trading Frame "captures" every market and "automatically" sets it to its Harmonic Octave Let's "see" if random price-action is really random.

To prove these lines are totally random we shall set the Trading Frame after we have already "seen" our market "trade" to the right over any given Time Frame!

You must challenge your mind and re-align your mental brain cells so they stack in a Hologram set to binary math.

After you move this simple reasoning exercise your ability to retain these numbers in memory shall help raise your I.Q. long term.

Please try and find additional math equations and e-mail me your new findings.

Trading any market is a math mental mindset only! Words or feelings confuse our trading strategy. We must re-train our brains to think simpler.

Step # 6. Enter the Exclusive License String on this Line
The string will be six numbers

Enter Your License String

License String:

To receive a license string please send the Registration Key from the Dialogbox before to T. H. Murrey. You then will receive the license string.

Please enter this license string in the EditBox above this description box and press the OK button. If you already had an old license string it will get overwritten by the new one.

In the Registration Information dialogbox you will be able to verify that this license key was successfully entered.

Accept License String Cancel
